Executive Summary

This report falls under the framework of the requirements set out in Spanish Law 20/2015, dated July 14, 2015 on the planning, monitoring and solvency of insurance and reinsurance companies and its implementing regulation Royal Decree 1060/2015, dated November 20, 2015 on the planning, monitoring and solvency of insurance and reinsurance companies. Both regulations are a transposition of Directive 2009/138/EC of European Parliament and of the Council of November 25, 2009, on the taking-up and pursuit of the business of insurance and reinsurance (hereinafter the Solvency II Directive).

Commission Delegated Regulation (EU) 2015/35 supplements the aforementioned directive and regulates the minimum content that must be included in the Solvency and Financial Condition Report.

Activity and results

MAPFRE S.A. (hereinafter "the Controlling company" or "the company") is a limited liability company whose shares are listed on the stock exchange. It is the parent company of a group of subsidiaries devoted to providing insurance activities in its various lines of business, both Life and Non-Life, real estate investments and services. The accounting data come from the consolidated annual accounts of the Group that have been prepared in accordance with the International Financial Reporting Standards adopted by European Union (IFRS-EU).

MAPFRE S.A. and subsidiaries (hereinafter "the Group" or "MAPFRE Group") operate in most business lines established in the Solvency II regulations.

MAPFRE operates in a total of 43 countries worldwide; its most significant presence is in Spain, Brazil, USA, Mexico and Germany.

The attributable result to the Controlling company as at December 2021 amounts to 765.2 million euros, with an improvement of 45.3 percent.

The gross cost of claims directly caused by COVID-19 amounts to 460.4 million euros in 2021. The table below shows the breakdown by business lines:

Lines	Amount
Health	88.7
Burial	15.0
Life Risk	278.8
Travel Assistance (Travel Insurance)	8.0
Other	17.7
Total Insurance	408.2
Accepted reinsurance	52.1
Accumulated total	460.4

Figures in million euros

MAPFRE Group closes the financial year 2021 with consolidated net premiums earned of 17.46 billion euros (16.70 billion euros in 2020) with an increase of 4.6 percent.

The Group's consolidated revenues reaches 27.26 billion euros, an increase of 7.2 percent, mainly due to the increase in the issuing of premiums and higher financial income.

In 2021 the combined ratio stands 97.5 percent (94.8 percent in 2020), increasing the loss ratio to 68.2 percent (65.6 percent in 2020).

Return on equity (ROE), which represents the relationship between net profit attributable to controlling company (deducting the share of non-controlling interests) and average shareholders' equity, is 9.0% percent (6.1 percent in 2020).

Governance system

At December 31, 2021, MAPFRE Group employed the following individual governing bodies¹:

The appropriate commercial, operational, and strategic management of the business is carried out via these governing bodies, enabling the Group to respond in a suitable and timely manner to any eventuality that might occur at the various organizational levels and corporate and business contexts.

In order to ensure that the controlling company has an adequate structure, it has policies that govern the key functions (Actuarial, Internal Audit, Regulatory Compliance and Risk Management) and they ensure that those functions follow the requirements established by the regulator and are faithful to the lines of governance established by MAPFRE Group.

The controlling Company's Board of Directors establishes its Risk Management System, which states the related policies and strategies adopted to manage the "three lines of defense" model.

Within this framework, the MAPFRE S.A. structure is comprised of areas which, in their respective frameworks, perform a number of independent supervisory activities with regard to assumed risks.

Risk profile

The MAPFRE Group calculates the Solvency Capital Requirement (hereinafter SCR) in accordance with the methodology established in the Solvency II regulations, applying the standard formula except for the sub-risk of longevity in Spain, which is calculated with a partial internal model approved by the General Directorate for Insurance and Pension Funds (DGSFP).

¹ With effect from March 11, 2022, the Risk Committee changes its name to the Risk and Sustainability Committee, since the Bylaws and the Regulations of the Board of Directors are modified, attributing powers to this committee in matters of sustainability.

The charts below show the Group's risk profile composition for the various risk modules:

Figures in millions of euros

The preceding graph shows the following elements grouped as "Other adjustments":

- The capacity to absorb losses from technical provisions and deferred taxes.
- The capital requirement for companies under equivalent regimes and other sector regimes.
- The requirements for non-controlled companies.

The main risks to which MAPFRE Group was exposed during 2021 are related to market and Non-Life underwriting, representing 78.9 percent of SCR risks.

In 2021, the relative share of market risks increases, and the relative share of Life underwriting risk decreases due to the exit of the BANKIA VIDA operation from MAPFRE's scope.

Other risks to which the Group is exposed are the risk of cybersecurity and failures in ICT systems, inflation, regulatory changes, personnel management and organization, and the risk of new competitors. Likewise, the MAPFRE Group identifies emerging risks as the main ones that it expects to face in a longer term (5-10 years). Among these risks would be the risk of climate change, risk of products and services and the risk of instability and financial crises due to conflicts and scarcity of resources. The details of these risks are included in section C.6.

On the other hand, the MAPFRE Group analyzes the sensitivity of the solvency ratio in relation to certain macroeconomic and Life business variables. The results of these sensitivities show that the most relevant variables for Solvency Ratio purposes are:

- Increase in corporate and sovereign debt spreads.
- Increase in risk-free rates.
- Fall in equities.

Valuation for solvency purposes

The total value of the assets under Solvency II regulations amounts to 50.02 billion euros, whereas the valuation under accounting regulations amounts to 54.04 billion euros. This difference is mainly due to zero valuation under the Solvency II regulations of the goodwill, prepaid commissions and other acquisition costs and other intangible assets; and to a lesser extent, the lower value of recoverable reinsurance amounts that are valued on a market economic basis under that regulation.

The total value of the liabilities under Solvency II regulations is 41.20 billion euros, compared to the 45.13 billion euros reflected under accounting standards, in the comparable perimeter. The main difference between the two sets of regulations arises with respect to technical provisions, since under Solvency II they are measured using an economic market criterion.

Figures in millions of euros

The total excess of assets over liabilities amounts to 8.82 billion euros under Solvency II (it has increased by 333.35 million euros with respect to the previous year). This surplus under Solvency II is 1.10% less than the excess of assets over liabilities obtained by applying the criteria established in the accounting regulations in the comparable perimeter.

During the fiscal year, there have been no changes in the valuation criteria for assets and liabilities.

Capital management

The MAPFRE Group has an adequate structure and processes in place to manage and monitor its shareholders' equity, with a medium-term capital management plan, maintaining solvency levels within the limits established in the regulations and in the Group's risk appetite.

The table below shows a breakdown of the Group's solvency ratio or SCR coverage ratio:

	December 31, 2021	December 31, 2020
Solvency capital requirement (SCR)	4,507.77	4,622.33
Eligible own funds to cover the SCR	9,301.52	8,916.91
Solvency ratio (SCR coverage)	206.3%	192.9%

Figures in millions of euros

As at December 31, 2021, eligible own funds for SCR coverage totals 9.30 billion euros (8.92 billion euros in 2020) considered unrestricted Tier 1 own funds apart from 1.17 billion euros (1.22 billion euros in 2020) of Tier 2 subordinated debt. Tier 1 own funds includes 1.27 billion euros (1.32 billion euros in 2020) corresponding to companies included using the deduction and aggregation method.

The Group's solvency ratio representing the proportion of own funds held to cover SCR is 206.3 percent (192.9 percent in 2020), indicating its solid position to be able to meet future commitments, taking into account the capital requirements established by Solvency II regulations.

To calculate the solvency ratio, the Group has applied the transitional measures on technical provisions, and equity, as well as the adjustments for matching and volatility. The matching technique is an effective measure and good practice to mitigate interest rate risk. However, as shown in the table below, and due to the non-application of the diversification benefit, the Solvency II ratio would be higher if the matching adjustment was not applied. The surplus of own funds over the required capital increases because of applying this measure².

Had it not applied these transitional measures and adjustments, the Group would still have its eligible own funds for SCR coverage, as shown below:

Solvency ratio 12/31/2020	206.3%
Impact of transitional measures on technical provisions	-10.9 p.p.
Impact of transitional measures on equity	-0.2 p.p.
Total ratio without transitional measures	195.2%

Solvency ratio 12/31/2020	206.3%
Impact of matching adjustment	+1.6 p.p.
Impact of volatility adjustment	-0.2 p.p.
Total ratio without matching and volatility adjustments	207.7%

p.p.: percentage points

² Details of the impacts can be found in section D.2.2.

A. Activity and results

The accounting data of this section come from the consolidated annual accounts of the Group that have been prepared in accordance with the International Financial Reporting Standards adopted by European Union (IFRS-EU).

A.1. Activity

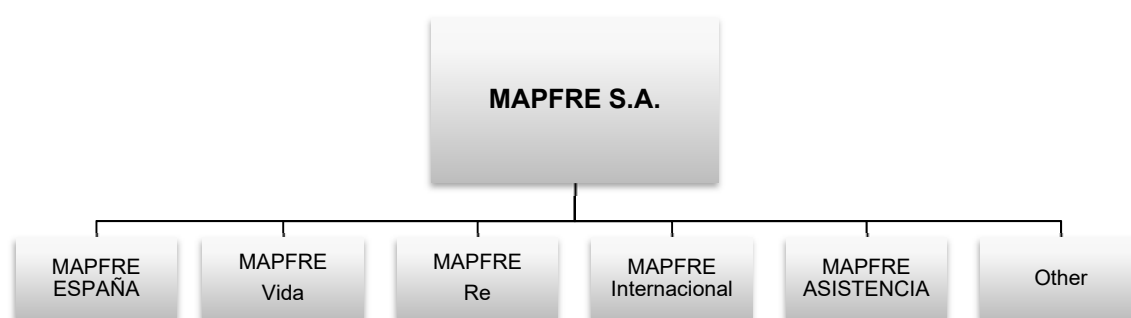

A.1.1. Business name, legal form and activity

MAPFRE S.A. is a limited liability company whose shares are listed on the stock exchange. It is the controlling company of a group of subsidiaries devoted to providing insurance activities in its various lines of business, both Life and Non-Life, asset management, property investment and services.

MAPFRE S.A. was created in Spain, and its registered office is at Carretera de Pozuelo No. 52 in Majadahonda, just outside Madrid.

Appendix I reflects its holdings in Group, multi-group, and associated companies.

In addition, an organization chart showing the MAPFRE Group's simplified legal structure is shown below:

Supervision

The General Directorate for Insurance and Pension Funds (hereinafter DGSFP) is responsible for the financial supervision of the MAPFRE Group since the controlling Company is domiciled in Spain.

The DGSFP is located at Paseo de la Castellana, 44, Madrid (Spain), and its website is www.dgsfp.mineco.es.

Additionally, the Group is also under the supervision of the Spanish National Securities and Exchange Commission (the "CNMV") due to the listing of MAPFRE S.A. shares and the issuance of fixed-income securities traded in organized markets, Collective Investment Institutions and Investment Funds.

The CNMV is located at Edison, 4, 28006 Madrid, its website is www.cnmv.es.

External audit

On February 9, 2022, KPMG Auditores S.L. issued unqualified audit reports on MAPFRE S.A.'s individual and consolidated annual accounts at December 31, 2020. This audit firm is located at Torre de Cristal, Paseo de la Castellana, 259 C, Madrid (Spain).

Holders of qualified Company shares

MAPFRE S.A. is a subsidiary of CARTERA MAPFRE, S.L, Single-Member Company (hereinafter, CARTERA MAPFRE) with a 69.7 percent share of the capital as at December 31, 2021. CARTERA MAPFRE has as its exclusive activity the holding of the shares of MAPFRE S.A. and other financial instruments (fixed income securities and shares).

In turn, CARTERA MAPFRE is fully controlled by FUNDACIÓN MAPFRE, both of which are domiciled in Spain.

Business lines

MAPFRE Group operates in most business lines established in the Solvency II regulations.

Geographical areas

MAPFRE is a multinational company chiefly devoted to insurance and reinsurance activities and operates in 43 countries worldwide.

During 2021, the Group's business activities develops through an organizational structure made up of four Business Units (Insurance, Reinsurance, Global Risks and Assistance) and six Regional Areas: Iberia (Spain and Portugal), LATAM North (Mexico, Dominican Republic, Panama, El Salvador, Nicaragua, Costa Rica, Honduras and Guatemala), LATAM South (Colombia, Venezuela, Ecuador, Peru, Chile, Argentina, Uruguay and Paraguay), Brazil, North America (United States and Puerto Rico) and EURASIA (Italy, Germany, Malta, Turkey, Philippines and Indonesia). The Reinsurance and Global Risks Units are integrated into the legal entity MAPFRE RE.

A.1.2. Events with significant impact

Business-related events

Profits attributable to the Controlling Company as at December 2021 amount to 765.2 million euros, with an improvement of 45.3 percent.

The gross cost of claims directly caused by COVID-19 amounts to 460.4 million euros in 2021. The table below shows the breakdown by business lines:

Lines	Amount
Health	88.7
Burial	15.0
Life Risk	278.8
Travel Assistance (Travel Insurance)	8.0
Other	17.7
Total Insurance	408.2
Accepted reinsurance	52.1
Accumulated total	460.4

Figures in million euros

The MAPFRE Group closes to December 2021 with consolidated net premiums earned of 17.46 billion euros (16.70 billion euros in 2020), an increase of 4.6%.

The Group's consolidated revenues reaches 27.26 billion euros, an increase of 7.2 percent, mainly as a result of reduced issuing of premiums and lower financial income.

In 2021 the combined ratio is 97.5 percent (94.8 percent in 2020), with the loss ratio falling to 68.2 percent (65.6 percent in 2020).

Return on equity (ROE), which represents the relationship between net profit attributable to controlling company (deducting the share of non-controlling interests) and average shareholders' equity, is 9.0 percent (6.1 percent in 2020).

The following are among the relevant events for 2021:

- **Restructuring of operations**

- Voluntary early retirement plan in Spain aimed at employees of its insurance operations in Spain in order to improve the efficiency of sales and administrative process, as well as adapting resources to new advances in digitalization. The Group recorded, at June 20, a provision for this concept in the IBERA region for approximately 75 million euros. Additionally, in December, the voluntary early retirement plan was expanded by 100 million euros, in order to accelerate the transformation of MAPFRE's operating model in IBERIA.
- VERTI Italia restructuring plan, which is in its final phases of definition and could imply a significant reduction of the personnel structure in the different areas of the company, with a total cost of 19.9 million euros.
- As part of the strategic reorganization process of MAPFRE ASISTENCIA, the sale of InsureandGo and the closure of the insurance branch in the United Kingdom have been carried out, generating a positive result net of taxes of 4.5 million euros.

- **Acquisitions**

- Acquisition of additional shares from non-controlling shareholders of MAPFRE Middlesea p.l.c. in Malta and MAPFRE Atlas in Ecuador, representing 1.27 and 7.66 percent of the share capital, respectively, for a total amount of 2.5 million euros. On the other hand, 32.46 percent of the share capital of MAPFRE Perú Vida were acquired, for the amount of 109.2 million euros. This acquisition implies a negative adjustment to the Group's consolidated reserves, for the amount of 83.3 million euros.
- Increase of the stake in Abante reaching 18.77 percent, with a disbursement of 27.4 million euros.

- **Disposals**

- Bankia agreement termination, which has involved MAPFRE receiving 570.8 million euros, and an extraordinary result of 167.1 million euros, which could be increased by 52 million euros in arbitration process sides in favor of MAPFRE's interests.
- Sale of Industrial Re, generating a gross gain of 3.5 million euros.
- Sale of Rastreator and Preminen generating a gross capital gain of 14.0 million euros.

- **Other operations**

- Buyback of the Group's debt instruments, which has implied the acquisition by MAPFRE of 142.7 million euros in securities from holders and their immediate cancellation, which has implied a net expense of 9.6 million euros for the Group.

A.2. Underwriting results

The quantitative information relating to the underwriting activity and results in 2021 and 2020, by line of business, is presented below.

The preceding tables only show the business lines operated by the Group; the business lines in which it does not operate have been eliminated. There were no significant changes in the Group's key lines of business.

The MAPFRE Group closes 2021 with consolidated net earned premiums of 17.46 billion euros (16.70 billion euros in 2020), an increase of 4.6 percent, due to the favorable evolution of the issuing of main business lines.

According to the classification of the business lines established by Solvency II, these net allocated premiums are distributed between Non-Life with 12.68 billion euros (12.44 billion euros in 2020) and Life with 4.78 billion euros (4.26 billion euros in 2020).

The weight of the Non-Life insurance line represents 72.6 percent of the Group's total net allocated premiums (74.5 percent in 2020), compared to 27.4 percent for the Life business segment (25.5 percent in 2020).

"Fire and other damage to property insurance" is the Group's most significant line, with 3.52 billion euros in net earned premiums, which represents 27.7 percent of Non-Life premiums and 20.1 percent of total net earned premiums. It is followed by "Third-party liability automobile insurance" with 3.10 billion euros of net earned premiums or 24.4 percent of the Group's Non-Life net earned premiums, and 17.7 percent of total Group net earned premiums.

The quantitative information relating to the underwriting activity and results in 2021 and 2020, by geographical area, is presented below. The information corresponds to Spain with other five top countries according to the origin of the gross premiums earned for Life and Non-Life:

In 2021, the ranking of the main countries with respect to underwriting activity and results is composed of the same countries as the previous year for the Non-Life business, although, within this segment, due to the evolution of its businesses, the United Kingdom gives up its position to Mexico. In the case of the Life business, Portugal gives up its position to Peru.

A.3. Performance of investments

A.3.1. Information on income and expenses arising from investments

The following is a breakdown of quantitative information on investment income and expenses:

Financial income	2021	2020
REVENUES FROM INVESTMENTS		
Real estate investments	43.5	44.6
Revenue from the held-to-maturity portfolio	160.8	152.2
Revenue from the available-for-sale portfolio	1,100.2	1,082.1
Revenue from the trading portfolio	297.8	245.6
Other financial returns	153.2	127.4
TOTAL REVENUES FROM INVESTMENTS	1,755.5	1,651.9
REALIZED AND UNREALIZED GAINS		
Net realized gains		
Real estate investments	13.4	34.0
Held-to-maturity portfolio financial investments	-	-
Available-for-sale portfolio financial investments	339.7	329.3
Trading portfolio financial investments	63.2	63.9
Other	-	-
Unrealized gains		
Increase in fair value of the trading portfolio and earnings from derivatives	177.0	141.5
Other	2.5	5.8
TOTAL GAINS	595.8	574.5
OTHER FINANCIAL INCOME FROM THE INSURANCE BUSINESS		
Gains on investments on behalf of policyholders bearing the investment risk	254.6	137.8
Positive foreign exchange differences	1,682.2	2,042.9
Other	23.2	34.4
TOTAL OTHER FINANCIAL INCOME FROM THE INSURANCE BUSINESS	1,906.0	2,215.1
TOTAL REVENUE FROM THE INSURANCE BUSINESS	4,257.3	4,441.5
FINANCIAL INCOME FROM OTHER ACTIVITIES	104.2	72.4
TOTAL FINANCIAL INCOME	4,361.5	4,513.9

Figures in millions of euros

Financial expenses	2021	2020
EXPENSES FROM INVESTMENTS		
Real estate investments	28.1	24.4
Expenses from held-to-maturity portfolio	11.9	7.2
Expenses from the available-for-sale portfolio	266.9	171.2
Expenses from trading portfolio	235.3	133.5
Other financial expenses	161.4	124.8
TOTAL EXPENSES FROM INVESTMENTS	703.6	461.1
REALIZED AND UNREALIZED LOSSES		
Net realized losses		
Real estate investments	1.2	18.0
Held-to-maturity portfolio financial investments	-	-
Available-for-sale portfolio financial investments	98.8	232.2
Trading portfolio financial investments	46.0	64.1
Other	2.1	8.1
Unrealized losses

Figures in millions of euros

The improvement in the financial income in 2021 has its origin in Spain and Malta due to the increase in Unit-Linked investments and similar products. It is also noteworthy the capital gains realized in the investment portfolio of IBERIA and MAPFRE RE.

Net income from fixed assets and the insurance business investments total 1.60 billion euros (1.09 million euros in 2020), representing 7.2 percent of written direct and accepted insurance premiums (5.3 percent in 2020). Of this income, 350.1 million euros are from net realized gains (104.8 million euros in 2020). It should be noted that the variations in financial investments are produced by the management of the business process itself without any significant change in their management.

With regard to portfolio diversification, the burden of investment in public and corporate debt varies throughout the year, from 52.1 percent and 18.1 percent in 2020 to 49.6 percent and 16.5 percent in

2021, respectively. The exposure to equities, mutual funds and other collective investment organizations increases from 9.2 percent to 10.7 percent.

A.3.2. Information regarding fair value gains or losses recognized under equity

There follows quantitative information regarding gains and losses arising from investments broken down by type of asset, and recognized directly in equity for the 2020 and 2019 fiscal years, as stated on the financial statements:

Investments	Net Gains recognized in equity		Net Losses recognized in equity	
	2021	2020	2021	2020
Financial investments	144.3	1,068.50	(1,588.9)	(563.40)
Fixed income	-	1,068.50	(1,588.9)	-
Equities and Mutual Funds and other collective investment bodies	144.3	-	-	(563.40)
Shadow accounting	947.7	-	-	(228.10)
Other adjustments	31.4	-	-	(10.00)
TOTAL	1,123.4	1,068.50	(1,588.9)	(238.10)

Figures in millions of euros

The above table reflects the effect on net equity of the negative performance of the fixed financial markets in 2021, as a consequence of the increase in interest rates partially offset by shadow accounting.

A.3.3. Information about asset securitization

The MAPFRE Group does not own any asset securitizations at significant amounts.

A.4. Result from other activities

A.4.1 Other revenues and expenses

During recent years, the MAPFRE Group incurred the following income and operating expenses from other activities:

Other activities	2021	2020
Operating revenue	315.6	295.3
Operating expenses	408.0	437.0

Figures in millions of euros

These operating incomes and expenses come mainly from the MAPFRE Group's business in investment activities, in MAPFRE ASISTENCIA subsidiaries whose social purpose is the provision of services and other activities carried out in Spain, Argentina, Brazil and Mexico, mainly burial services and other service companies.

A.4.2 Leasing contracts

Finance leases

The MAPFRE Group does not have any significant finance leases.

Operational leases

The Group is involved as both a lessor and a lessee in the operational leasing of real estate and other items of property, plant, and equipment.

In relation to the leasing contracts in which the Group is the lessee, the EU-IFRS 16 "Leases" Standard is applied since its entry in force on January 1, 2019. These contracts have an average duration between 5 and 18 years. Total payments for the period amount to 56.1 million euros (67.0 million euros in 2020).

With regard to the leasing contracts in which the Group is the lessor, these leases have an average duration of 7.0 years, with no renewal clauses specified in the contracts. The net book value from the operating lease contracts as lessor are 862.4 and 839.1 million euros at the end of 2021 and 2020.

A.5. Any other information

There is no other significant information regarding the Group's activity and results not included in the previous sections.

Intra-group operations

Below is some quantitative information regarding significant intra-group operations, which have been carried out under market conditions and that have not had an effect because they have been eliminated from the consolidation process:

Revenue/Expenses	2021	2020
Internal dividends	1,340.3	1,134.7
Services provided/received	631.2	539.8
Returns/costs of real estate investments	24.1	23.5
Returns/costs of financial investments	24.3	25.8
Insurance activities		
Accepted/granted premiums	2,840.2	2,560.9
Loss ratio accepted/granted	1,429.9	1,527.7
Changes in technical provisions	96.7	5.8
Commissions	528.5	541.7

Figures in millions of euros

The amounts indicated under the *Insurance Activities* are from reinsurance and co-insurance operations carried out between companies of the Group.

Below is some quantitative information regarding the main intra-group balances eliminated:

Account balances	2021	2020
Insurance activities		
Receivables and payables	240.4	286.2
Deposits granted/accepted	59.8	57.8
Technical provisions granted/accepted	3,120.3	3,020.3

Figures in millions of euros

B. Governance system

B.1. General information on the system of governance

The structure, composition and functions to be carried out by the governing bodies of the MAPFRE Group are defined in the institutional, business and organizational principles and in the internal regulations on the boards of directors of MAPFRE subsidiaries, approved by the Board of Directors of MAPFRE S.A., along with its Corporate Bylaws and the Regulations of the Board of Directors.

The governing bodies of MAPFRE S.A. that are presented in detail below in this same section, i) ensure the Group's appropriate strategic commercial and operational management, ii) provide an appropriate response to any issues which might arise throughout its different organizational levels and business and corporate environment in a timely manner, and iii) are considered appropriate with respect to the nature, volume and complexity of the risks inherent to its activity.

The policies derived from the Solvency II regulations are reviewed on an annual basis, although modifications to them or to other internal regulations may be approved at any time, when deemed appropriate. Moreover, in accordance with the provisions of the Regulations of the Board of Directors of MAPFRE S.A., it undertakes an annual assessment of the quality of its work, and the operation of its Committees and Steering Committee. Where appropriate, it proposes an action plan to correct any deficiencies detected.

B.1.1 Governance system

The following outlines the main functions and responsibilities of MAPFRE S.A.'s governing bodies:

- **Annual General Meeting:** the most senior governing body, in that its decisions bind all shareholders. Both ordinary and extraordinary Annual General Meetings are called by the Board of Directors.
- **Board of Directors:** governing body that directs, manages, and represents the Company and its subsidiaries, and has full powers of representation, regulation, and management. It is MAPFRE Group's topmost decision-making and supervisory body and carries out the overall supervision of its subsidiaries. MAPFRE S.A.'s Board of Directors includes a Steering Committee and three delegate committees (Audit and Compliance Committee, Appointments and Remuneration Committee, and Risk Committee³), which establishes their roles as well as that of the Executive Committee.

MAPFRE S.A.'s Board of Directors is also responsible for establishing and overseeing the appropriate communication mechanisms as well as relationships with shareholders and investors.

- **Steering Committee:** the Board of Directors' delegate body with responsibility for coordinating and permanently supervising the management of the Controlling Company and its subsidiaries in strategic and operational aspects, so as to make the necessary decisions for its correct functioning. It has general decision-making capacity and has been expressly delegated all the powers that correspond to the Board of Directors, except for those that may not be delegated by legal imperative or, where applicable, by express provision in the Corporate Bylaws or in the Regulations of the Board of Directors of MAPFRE S.A.
- **Audit and Compliance Committee:** the Board of Directors' delegate body with functions including informing the Annual General Meeting on matters within its competence, supervising the suitability and efficiency of its Internal Control, internal audit procedures, and risk management

³ With effect from March 11, 2022, the Risk Committee changes its name to the Risk and Sustainability Committee, since the Bylaws and the Regulations of the Board of Directors are modified, attributing powers to this committee in matters of sustainability.

systems, discuss significant weaknesses in the Internal Control System with the account auditors, supervise preparation processes, and present mandatory financial and non-financial information. It is also in charge of overseeing that the MAPFRE Group correctly applies internal and external good governance codes.

- **Risk Committee⁴**: this is the Board of Directors' delegate body in charge of supporting and advising that body on the definition and evaluation of risk management policies and in determining propensity to risk and risk strategies.
- **Appointments and Remuneration Committee**: the delegate body of the Board of Directors for the coordinated development of appointment and remuneration policy regarding the Board Directors and Senior Management of the MAPFRE Group. Among its functions are evaluating the skills, knowledge and experience required on the Board of Directors (defining the necessary functions and skills in the candidates who must fill each vacancy), establishing a representation target for the least represented gender on the Board of Directors, and developing guidance on how to reach that target.
- **Executive Committee**: reports to the Steering Committee on the development and execution of the Committee's decisions, prepares proposals for decisions and plans for approval, and adopts ordinary management decisions within its scope of responsibility at any given time for a coordinated and synergistic management of the MAPFRE Group's day-to-day operations.

The Company's organizational chart and structure as on December 31, 2021 is set out below:

B.1.2. Key functions

In accordance with the terms outlined in the prevailing legislation, during its meeting held on February 11, 2014, MAPFRE S.A.'s Board of Directors approved its Actuarial, Compliance, and Risk Management policies; its Internal Audit Policy was approved during the meeting held on December 17, 2015. These policies are reviewed annually.

The key functions will act with operational independence, which means that when performing their responsibilities, they are free from any undue or inappropriate influence, control, misuse or restrictions. They have the resources that are necessary to correctly perform the functions assigned to them under their respective policies.

⁴ With effect from March 11, 2022, the Risk Committee changes its name to the Risk and Sustainability Committee, since the Bylaws and the Regulations of the Board of Directors are modified, attributing powers to this committee in matters of sustainability.

Those responsible for the key functions shall report directly to the Board of Directors, or through the corresponding delegated committee, and to the Group's Chairman and CEO. The information and advice to the Board of Directors by the key functions is extended in the sections relating to each of them. The names of the persons responsible for the key functions have been reported to the General Directorate for Insurance and Pension Funds.

B.1.3. Relevant resolutions adopted by the Annual General Meeting and the Board of Directors regarding the governance system

In the 2021, no relevant agreements have been adopted that significantly affect the Governance system in addition to the modifications carried out in the Group's governing bodies.

B.1.4. Directors' remuneration

Remuneration paid to the Group's management and employees is determined in accordance with what is set forth in the regulations in force and the Group's Compensation Policy approved by the Board of Directors on December 1, 2015 and reviewed annually.

This policy seeks to establish adequate remuneration in accordance with the role or position of work and its performance and to act as a motivating and satisfying element to achieve the objectives set and to comply with the Group's strategy, while promoting adequate and effective risk management, discouraging taking risks that exceed tolerance limits, as well as conflicts of interest. The general principles are:

- It is based on the job position and includes measures to avoid any conflicts of interest that may arise.
- It takes into account merit, technical knowledge, professional skills and performance.
- It guarantees equality, irrespective of gender, race or ideology.
- Transparency: it is understood by all stakeholders.
- It has a flexible structure and can be adapted to different groups and market circumstances.
- It is aligned with the Group's strategy as well as its risk profiles, objectives, risk-management practices, and long-term interests.
- It is competitive with respect to the market.

The remuneration of staff under this policy consists of five elements: fixed remuneration, variable remuneration/incentives, recognition programs, social benefits and allowances.

The Annual General Meeting held on March 13, 2020 approved the Board Members' Compensation Policy for 2020-2022, based on these general principles:

- Priority of the creation of value and profitability in the medium- and long-term over short-term results.
- Reasonable proportionality between economic situation vs. comparable market and company standards.
- Alignment with the sales and risk management strategy, risk profile, objectives, and risk management practices.
- Appropriate and efficient risk management within the established risk tolerance limits.
- Attraction and retention of talent.
- Appropriate compensation for dedication, qualification and responsibility.

- Appropriate proportion of fixed and variable components, avoiding excessive reliance on variable components.
- Deferred payment of a significant portion of the variable remuneration.
- Possibility of ex-post adjustments to the variable remuneration.
- Avoidance of conflicts of interest.

Based on these principles, the remuneration system for directors, in their status as such, is defined by the following characteristics:

- It is transparent in terms of the board directors' remuneration information.
- It provides an incentive to reward dedication, qualifications and responsibility, without constituting an obstacle to the duty of loyalty.
- It consists of a fixed amount for membership of the Board of Directors and, where applicable, of the Steering Committee and Delegate Committees, which may be higher for people with positions on the Board or who chair the Delegate Committees. This remuneration may be supplemented with other non-monetary compensation (Life or health insurance, discounts on products sold by companies in the MAPFRE Group, etc.) that has been established for the Company personnel in general.
- It does not include variable components or those indexed to share value.
- Board directors are reimbursed for traveling expenses, commuting, and other costs incurred to attend meetings of the Group companies or to carry out their functions.

The remuneration system for the board directors who perform executive functions within the company is based on the following criteria:

- The remuneration for carrying out executive functions is determined according to those functions, levels of responsibility and professional profile, in accordance with the criteria governing the remuneration of MAPFRE Group senior executives.
- This remuneration consists of a balanced and efficient relationship between fixed and variable components, with fixed remuneration forming a sufficiently high proportion of total remuneration.
- Executive board directors may not receive the remuneration assigned to board directors in their status as such.
- The remuneration of executive directors is designed with a view to the medium- and long-term, which drives their performance in strategic terms while encouraging them to achieve short-term results.
- The remuneration system is compatible with appropriate and effective risk management, with the business strategy and with the long-term values and interests of the Company, without variable remuneration compromising the Company's capacity to maintain an adequate capital base.
- It takes into account market trends and its position in the market reflects the strategic approach of the Company, being effective for attracting and retaining the best professionals.
- It guarantees equality for all MAPFRE professionals, regardless of gender, race or ideology.

Notwithstanding the foregoing, the General Shareholders' Meeting on March 11, 2022 approved a new Compensation Policy for Directors for the period 2022-2024 in order to adapt its content to the new provisions established in article 529 novodecies of the Capital Companies Law, after the entry into force of Law 5/2021, of April 12, which modifies the Consolidated Text of the Capital Companies Law with regard to the promotion of long-term involvement of shareholders in listed companies and for the

replacement of consecutive three-year incentive plans for executive directors with overlapping three-year incentive plans, in line with current remuneration practices for senior management in listed companies and in the sector.

The executive directors, in their capacity as members of the Group's management team, are beneficiaries of defined-contribution pension commitments in the event of retirement, death or permanent disability, commitments externalized through collective life insurance. The terms of economic rights for them are detailed in their contracts. Additionally, the executive directors, like the rest of the employees of MAPFRE S.A., are beneficiaries of the MAPFRE employee pension scheme, a savings insurance and a mixed savings insurance and social benefits and other benefits, whose main characteristics are included in the Collective Agreement of MAPFRE Grupo Asegurador.

B.1.5 Additional information

Significant operations with shareholders, individuals with significant influence, or Board Members

The following is a breakdown of significant operations carried out in 2021 between the Company or Group companies, and the Company's significant shareholders:

Significant shareholder	Company	Nature of the relationship	Item	Amount (thousands of euros)
CARTERA MAPFRE, S.L.U.	MAPFRE S.A.	Contractual	Extension of the line of credit granted by CARTERA MAPFRE, S.L.U. to MAPFRE, S.A.	400,000

The Company's directors did not carry out any operations with the Company itself during the fiscal year, nor with any other Group company, that was outside the ordinary business of the companies or outside of normal market conditions.

B.2. Competence and honourability requirements

MAPFRE Group has a Policy of Competence and Honorability, approved by the Board of Directors on November 3, 2015 and reviewed annually, which sets forth the applicable requirements of Key Personnel⁵ in accordance with the following criteria:

- They should have adequate qualifications, knowledge and experience to ensure that the Group is managed and supervised in a professional manner.
- The expertise and experience will include academically acquired knowledge and the experience obtained in carrying out their duties in similar companies in their trajectory, and the respective individual responsibilities assigned.

The MAPFRE Group's Board members and Directors must have:

- Collectively: appropriate qualification, experience and knowledge at least on Insurance and Financial Markets, Business Strategies and Models, Governance System, Financial and Actuarial Analysis, and Regulatory Framework.

⁵ Relevant person: The directors, company senior management who report directly to its governing body, executive committees or managing directors, and those responsible for key functions.

- Individually: training and experience appropriate to the professional profile, specifically in the insurance and financial services area, with practical experience acquired from prior positions held during a sufficient period of time.

In addition, Key Personnel must have a proven standard of personal, professional, and commercial integrity based on trustworthy information concerning their personal behavior, professional conduct and reputation, covering any criminal, financial, and supervisory aspects considered pertinent for these purposes.

In the event of outsourcing a key role, all necessary measures shall be taken to ensure that the personnel responsible performing the outsourced function comply with the applicable competence and honorability requirements.

Procedure for designation

People who have been designated to hold Key Personnel positions shall underwrite a prior, truthful and complete declaration of their personal, family, professional or business circumstances.

The above statement must be made in the MAPFRE Group's model forms established for this purpose.

While carrying out the role, they must maintain their declarations continually updated, and must communicate any relevant changes in their situations, and participate in periodic updates when required to do so by the MAPFRE Group's governing body, including the reevaluation of any competence and honorability requirements.

B.3. Risk management system, including risk and solvency self-assessment

B.3.1 Governance framework

The responsibilities of the Risk Management System are integrated into the Group's organizational structure, based on the "three lines of defense" model described in section B.4.1 of this report; therefore, all organization personnel are assigned responsibilities to comply with its control objectives.

MAPFRE S.A.'s Board of Directors is ultimately responsible for guaranteeing the efficiency of the Risk Management System, establishing the risk profiles and tolerance thresholds, and approving the main risk management strategies and policies.

To perform its functions with regard to the Risk Management System, the Board of Directors of MAPFRE S.A. has the Risk Committee⁶ which, as a delegate body, supports and advises in the definition and evaluation of risk management policies and the determination of risk propensity and risk strategy.

MAPFRE S.A.'s Board of Directors' Audit and Compliance Committee is the delegate body in charge of supervising the effectiveness of the Group's internal control, internal audit, and risk-management systems.

The above governing bodies include other official organizations which provide risk management support:

- The Security and Environment Committee ensures that the Group's objectives and business needs are achieved through correct security and environmental risk management.
- The Security Committee monitors exposure to insurance and reinsurance counterparties.

⁶ With effect from March 11, 2022, the Risk Committee changes its name to the Risk and Sustainability Committee, since the Bylaws and the Regulations of the Board of Directors are modified, attributing powers to this committee in matters of sustainability.

- The Investment Risk Committee to monitor and control the main exposures in assets and investment instruments, ensuring respect for the principles established in the Investment Policy.

The Corporate Risk Office sets guidelines for risk management that are assumed by the governing bodies of the individual companies with the necessary adaptations. Its functions include the coordination of the strategies, processes and procedures that are necessary to continually identify, measure, monitor, manage and report all the risks to which the Group and its subsidiaries and investee companies are exposed, or may be exposed, as well as their interdependencies.

The Group Chief Risk Officer reports to MAPFRE S.A.'s Board of Directors through the Risk Committee and the Group's Chairman and CEO.

The performance of the Corporate Risk Office is supervised by the member - General Manager of the Corporate Finance Area by delegation of the Board of Directors of MAPFRE S.A. and its delegate committees. The companies' Risk Managers maintain a double dependence: hierarchically with their hierarchical superior at the company and, functionally, with the Corporate Risk Office.

B.3.2 Risk management objectives, policies, and processes

The main objectives of the Risk Management System are the following:

- To promote a solid culture and an effective system of risk management.
- To ensure that risk analysis is part of the decision-making process.
- To preserve the Group's financial health and solvency, contributing to its positioning as a trusted global insurance company.

The Risk Management System is based on the integrated management of each and every business process, and on the adaptation of risk levels to the established strategic objectives.

To ensure effective risk management, the Group has developed a set of risk management policies, in line with Solvency II requirements. One of the policies is the Risk Management Policy, which serves as the framework for risk management, and, in turn, for the development of policies regarding specific risks. Each policy aims to:

- Set down general guidelines, basic principles and a general action framework for the type of risk concerned, ensuring coherent application within the Group.
- Assign responsibilities and define the strategies, processes and reporting procedures required to identify, measure, monitor, manage and report the risks included within their scope.
- Define the reporting guidelines and the communication duties of the area responsible for risk.

To ensure compliance with the limits established in the Risk Appetite Policy (approved by the Board of Directors establishing the degree of risk the Group is prepared to assume to achieve its business objectives with no relevant deviations, even in adverse situations), capital is generally established as an estimate based on budget forecasts of the following year, and it is regularly reviewed throughout the year according to the development of risks.

MAPFRE's governing bodies receive regular information regarding the quantification of the main risks to which the Group is exposed and the capital resources available to confront them, as well as information regarding compliance with the set risk appetite limits.

The actions to be taken with respect to identified risks are decided on by the Board of Directors, which is immediately informed of any risks that:

- Depending on how it evolves, may exceed the established risk limits.

- May lead to losses equal to or in excess of the established risk limits.
- Might endanger compliance with solvency requirements or the functional continuity of any of the Group's companies.

The details of the identification, measurement, management, monitoring and reporting processes are shown below by type of risk:

Type of risk	Measurement and management	Monitoring and reporting
Underwriting risk For Non-Life companies: <ul style="list-style-type: none"> - Premium risk - Reserve risk - Catastrophic risk - Reinsurance mitigation For Life companies: <ul style="list-style-type: none"> - Longevity - Mortality - Morbidity - Review - Expenses - Lapse - Catastrophic 	Standard formula Partial internal model of longevity	Quarterly
Market risk Includes the following risks: <ul style="list-style-type: none"> - Interest rate - Shares - Properties - Spread - Concentration - Currency 	Standard formula	Quarterly
Credit risk Reflects any possible losses arising from unexpected non-compliance by counterparties and debtors	Standard formula	Quarterly
Operational risk Risk of possible losses deriving from the unsuitability or malfunction of internal processes, personnel or systems, or from external events (excluding the risks deriving from strategic decisions and reputational risks)	Standard formula Dynamic qualitative analysis of the risks by processes (Riskm@p) Recognition and monitoring of operational risk events	Quarterly
Liquidity risk Risk that the company might not be able to materialize its investments and other assets in order to meet its financial commitments at maturity	Liquidity position Liquidity indicators	Continuous

Type of risk	Measurement and management	Monitoring and reporting
Non-compliance risk Risk of losses due to legal/regulatory penalties or reputational losses arising from the failure to comply with laws and regulations, or with applicable administrative requirements	Monitoring and recognition of significant events	Annually
Strategic and corporate governance risks Includes the following risks: - Business ethics and good corporate governance - Organizational structure - Alliances, mergers and acquisitions - Market competition	Application of the corporate policies aligned with MAPFRE Group's Institutional, Business, and Organizational Principles	Continuous

All the calculations derived from the standard formula and the approved partial internal model are updated in the event of changes in the risk profile, and the Board of Directors is regularly informed of the risks to which the MAPFRE Group is exposed.

B.3.3 Internal assessment of risks and solvency

The Own Risk and Solvency Assessment (ORSA) is integrated and forms part of the Risk Management System. It has mechanisms to identify, measure, monitor, manage and report any short- or long-term risks identified by the Group throughout the period reflected in the strategic plan, as well as to measure the sufficiency of capital resources based on the understanding of its actual solvency needs. Based on this objective, it will include all the significant and potential sources of risk the MAPFRE Group faces and facilitates the taking of initiatives for their management and mitigation.

The Corporate Risk Office coordinates the preparation of the ORSA report on a yearly basis, creating the draft report for submission to the Board of Directors for approval and channels the various contributions made by the areas or departments involved in the process. However, if significant events occur that require additional internal assessments during the year (Extraordinary ORSA), the sections affected by changes in the risk profile would be updated, maintaining the same approval process.

The ORSA process is coordinated with the strategic planning process, forms an integral part of the business strategy and is taken into account in the strategic decision in such a way as to guarantee the relationship between business strategy and global solvency levels is ensured. To this end, the ORSA process: i) takes into account the results obtained as part of the different procedures performed, including material or emerging and sustainability risks, and risk control procedures; and ii) develops the projections of the global solvency needs and stress tests that may pose a risk to the achievement of the Group's strategic or solvency objectives.

The Corporate Risk Office coordinates the stress tests to verify the level of losses from present and emerging risks to which the Group may be exposed, notwithstanding that the Risk Function of the companies executes the stress tests it considers appropriate for their business.

In addition, the Corporate Risk Office carries out capital management activities to verify:

- The adequate classification of the permissible capital in accordance with the applicable regulations.
- The compatibility of distributable dividends for continuous compliance with the Solvency Capital Requirement. Given the uncertainty generated by the pandemic, the supervisory authorities recommended extreme caution in the distribution of dividends and similar operations. In this

regard, the MAPFRE Group has carried out an exhaustive prospective analysis that justifies that the distribution of dividends does not compromise the financial or solvency situation or the protection of the interests of policyholders and insured, and is carried out in accordance with the recommendations of supervisors in the matter.

- Continuous compliance with eligible capital in forecasts.
- The amounts and deadlines for the various eligible capital items capable of absorbing losses.

The Corporate Risk Office is also responsible for the preparation, submission, and approval by MAPFRE S.A.'s Board of Directors of the medium-term Capital Management Plan, encompassing the results from forecasts included in the ORSA.

Section E 1.1 of this report includes more detailed information on capital management.

B.4. Internal control system

B.4.1. Internal control

Since July 2008, MAPFRE has had a written policy regarding Internal Control approved by MAPFRE S.A.'s Board of Directors and reviewed annually, which establishes the most important actions that should be carried out to maintain an optimum Internal Control System.

The implementation of the Internal Control System in MAPFRE has been based on the broad and exhaustive application of the COSO⁷ standard. According to it there is a direct relationship between the objectives that the company expects to achieve, the components of the internal control system (which represent what the organization needs to achieve the objectives), and its organizational structure (operating units, legal companies, etc.).

Due to its very nature, MAPFRE's Internal Control involves all personnel, regardless of their role in the organization; overall, they contribute to providing a reasonable assurance that established objectives will be reached, most notably related to:

- Operational objectives: effectiveness and efficiency of operations, differentiating those which are internal from the insurance activity (mainly underwriting, claims, reinsurance, and investment) as well as supporting operations and functions (human resources, administration, finances, sales, legal, technology, etc.).
- Information objectives: reliability (financial and non-financial, internal and external) of information regarding opportunity or transparency, among others.
- Compliance objectives: compliance with applicable laws and regulations.

The Internal Control System is integrated into the organizational structure under the three lines of defense model by assigning compliance responsibilities to internal control objectives in line with the model:

1. A first line of defense consisting of employees, management, and the business and supporting operating areas which are responsible for maintaining effective control over the activities carried out as an inherent part of their day-to-day work. Therefore, they assume the risks and are responsible for designing and applying the control mechanisms that are necessary to mitigate the risks associated with the processes that they carry out and to ensure that the risks do not exceed the established limits.

⁷ Committee of Sponsoring Organizations of the Treadway Commission

2. The second line of defense is integrated by the key Risk Management, Actuarial, and Compliance functions, as well as other assurance functions which oversee the functioning of internal control.
3. A third line of defense, consisting of Internal Audit, performs independent assessments of the suitability and efficiency of the Internal Control System and notifies of potential shortcomings as required to the parties responsible for applying corrective measures, including directors and the governing bodies, as appropriate.

The internal control system is structured and organized around five components: Control Environment, Risk Assessment, Control Activities, Information and Communication, and Supervision Activities and consists of tasks and actions that are present in all activities of the organization, being fully integrated into the organizational structure of the company

B.4.2. Compliance function

The Compliance Function is corporate in nature, integrated into the second line of defense of the Internal Control System, and ensures that the MAPFRE Group operates within the framework of regulatory compliance. It is structured within the organization through the Corporate Compliance Office, the Specific Compliance Areas, as well as the Holders of the Compliance Function within the companies.

The Company's Compliance Function is structured based on the related regulatory requirements, as well as the principle of proportionality related to its business size, nature and complexity of the risks assumed by the company in question.

Each company employs its own strategy for implementing and carrying out the Function, in accordance with the reference criteria shared by the Corporate Compliance Office.

The Heads of Compliance in the companies report to both their hierarchical superior in the Company and, functionally, to the Corporate Compliance Office.

The Manager of the Corporate Compliance Office reports to MAPFRE S.A.'s Board of Directors through the Audit and Compliance Committee and the Group's Chairman and CEO, assuming the responsibilities assigned in the compliance written policy.

The actions of the Corporate Compliance Office are supervised by the member - General Manager of the Corporate Finance Area by delegation of the Board of Directors of MAPFRE S.A. and its delegate committees.

The Compliance Function advises the Board on compliance with the laws, regulations and administrative provisions that affect the company or Group, and compliance with internal regulations. The Compliance Function also performs an assessment of the impact of any changes in the legal environment affecting the operations and the identification and assessment of non-compliance risk of the company and Group.

The Group's Compliance Policy, approved by the Board of Directors of MAPFRE S.A on February 11, 2014 and reviewed annually, includes in detail the scope of the Function, its structure, assigned responsibilities, as well as the information procedures established.

B.5. Internal audit function

Internal Audit is the risk management model's third line of defense, designed to provide an independent guarantee of the suitability and efficiency of the Internal Control System, as well as other elements of the governance system.

With this objective, MAPFRE Group's Internal Audit Corporate Area functionally reports to MAPFRE S.A.'s Board of Directors through the Audit and Compliance Committee and in particular, its President.

The Directors of the Audit Services and Units report (functionally and hierarchically) to the Group Chief Internal Audit Officer to thereby ensure their independence.

The Internal Audit Policy, approved by the Board of Directors on December 17, 2015 establishes the mission, functions and powers of the MAPFRE Group's Internal Audit Area, as well as the principles on which its structure is based.

In addition, the Group's Internal Audit Bylaw, in its latest version approved by the Audit and Compliance Committee establishes the framework for relations between MAPFRE Group's Internal Audit Area and the Audit and Compliance Committee, the Chair, C-Suite, and the Management of the Business Units, Regional Areas, Corporate Areas, insurance functions and external auditors. It also includes the rights and obligations of the internal auditors and their code of ethics which reflect the rules of conduct of auditors based on the integrity and honorability, objectivity, confidentiality and competence.

In addition, one of the main objectives of this document is to communicate the main activities of internal audit, recommendations and deadlines, treatment of audit reports and any other general circumstances related to the internal audit activity, which must be exclusively carried out by the MAPFRE Group's Internal Audit Services and Units.

The policy and bylaw are reviewed at least on a yearly basis. All changes that are made in these revisions are approved by the corresponding governing bodies of MAPFRE S.A.

B.6. Actuarial function

The Actuarial Policy of the Group, approved by the Board of Directors of MAPFRE S.A. on the February 11, 2014 and reviewed annually, it sets out in detail the principles of action and the responsibilities to be carried out by MAPFRE's Actuarial Departments (Corporate, Regional and Local).

The Corporate Actuarial Office performs the Actuarial function within the MAPFRE Group, carrying out the following activities established by insurance legislation:

- Coordinates the calculation of technical provisions.
- Ensures the adequacy of the methodologies and baseline models used, as well as the assumptions used in the calculation of technical provisions.
- Evaluates the sufficiency and quality of the data used in the calculation of technical provisions.
- Compares the best estimates with previous experience.
- Informs the administrative, management or supervisory body about the reliability and adequacy of the calculation of technical provisions.
- Contributes to the effective application of the risk management system, in particular as regards the modelling of risk on which the calculation of capital requirements is based.
- Pronounces on the Underwriting Policy and the adequacy of reinsurance agreements.

The Director of the Corporate Actuarial Office reports to MAPFRE S.A.'s Board of Directors through the Risk Committee, and the Group's Chairman and CEO, and is the ultimate responsible for the Group's Actuarial Function, and for the tasks defined in applicable Solvency II regulations, specifically, supervision, coordination, and establishment of the technical provisions under Solvency II.

The actions of the Corporate Actuarial Office are supervised by the member - General Manager of the Corporate Finance Area by delegation of the Board of Directors of MAPFRE S.A. and its delegate committees.

The dependence of the person responsible for the Actuarial Area of each company is double, on the one hand, of their hierarchical superior in the Company and, on the other hand, functionally of the Corporate Actuarial Office.

B.7. Outsourcing

Since June 2015, the MAPFRE Group has had an Outsourcing Policy covering the MAPFRE Group's functions and/or reinsurance/insurance activities, approved by the MAPFRE S.A. Board of Directors and reviewed annually. This policy constitutes the minimum level of obligatory compliance for all insurance and reinsurance companies, within the scope defined, which must be adapted into their internal and operational outsourcing regulations and principles defined in that Policy.

The basic principle established by the Outsourcing Policy is that the company will continue with full responsibility for meeting all obligations arising from the functions or activities susceptible to being outsourced, in the same manner as if they were to be performed internally.

As established in the policy, outsourcing of critical or important functions and/or activities must be approved by the company's board, which shall designate the party responsible for its monitoring and follow-up.

The party responsible for monitoring the outsourced function and/or activity reports annually to the board on the performance and results of the provider's provision of services and the fulfillment of the mandated obligations, in accordance with the company's internal regulations that regulate the outsourced function and/or critical or important activity.

The MAPFRE Group's existing governance structure ensures that it can maintain enough control over the functions and/or critical or important activities that have been outsourced by each of the Group companies, under the terms established in the Solvency II regulations.

B.8. Any other information

There is no other significant information regarding the governance system that has not been included in the preceding sections.

C. Risk profile

The MAPFRE Group calculates the Solvency Capital Requirement (SCR) in accordance with the requirements of the standard formula, methodology established by the Solvency II regulations, for all risks except for the sub-risk of longevity, which is calculated with a partial internal model approved by the General Directorate for Insurance and Pension Funds (DGSFP). This SCR, total and for the main risk categories, is considered a good measure of risk exposure since it recognizes the capital charge that corresponds to the main risks (such as underwriting, market, counterparty and operational risks).

As explained in sections C.4 and C.6, the exposure to other risks not included in the standard formula SCR calculation (such as, for example, liquidity risk) is not considered significant, as the Group is also applying effective measures for their management and mitigation.

The following charts show the composition of the MAPFRE Group's SCR for the various risk modules on December 31, 2021 and 2020 (Section E.2 explains the SCR calculation of this report):

As can be seen, the main risks to which MAPFRE Group was exposed during 2021 are related to market and Non-Life underwriting, representing 78.9 percent of SCR risks.

In 2021, the relative share of market risks increases, and the relative share of Life underwriting risk decreases due to the exit of the BANKIA VIDA operation from MAPFRE's scope. Further information is available in section E.2.1.

Other risks to which the Group is exposed are the risk of cybersecurity and failures in ICT systems, inflation, regulatory changes, personnel management and organization, and the risk of new competitors. Likewise, the MAPFRE Group identifies emerging risks as the main ones that it expects to face in a longer term (5-10 years). Among these risks would be the risk of climate change, risk of products and services and the risk of instability and financial crises due to conflicts and scarcity of resources. The details of these risks are included in section C.6.

A description of the main risk categories, the exposure to the risks, their management and mitigation techniques and possible concentrations are indicated below.

C.1. Underwriting risk

Underwriting risk is the risk of loss or adverse value changes in the commitments arising from insurance activities, due to the inadequacy of the pricing and provision creation assumptions

Exposure

The underwriting risk at December 31, 2021 represents 38.7 percent of all of the risk modules included in the SCR, the details and variations of which with respect to last year are presented in the following charts:

The composition of the different modules remains stable and there are no significant changes compared to the previous year.

Management and mitigation techniques

The MAPFRE Group minimizes the underwriting risk through a series of measures:

- Establishment of guidelines, limits, and exclusions in the underwriting risks: The Group's manuals or policies establish a series of guidelines, authorization and exclusion limits to reduce undesired underwriting risk, and to define the maximum acceptable exposure to concentrations of specific risks.
- Establishing a sufficient premium: The sufficiency of the premiums is an especially important element and determining it is based on actuarial calculations.
- Adequate supply of the technical provisions: Adequate management of benefits, in addition to the sufficiency of the technical provisions are both basic elements of insurance management. Technical provisions are calculated by the Group's actuarial teams and their amount is validated by an independent third party not involved in the calculation. The establishment of technical provisions is regulated by a specific policy.
- Use of reinsurance: Through its Reinsurance Department, each Group company is responsible for correctly identifying the appropriate level of risk transfer for its previously defined risk limits, and for defining/designing the most appropriate types of reinsurance agreements based on its risk profile and appetite, with help from the MAPFRE RE technical advisors. Once their reinsurance needs have been defined, companies communicate them to MAPFRE RE to jointly plan the optimal structure and conditions for ceding contracts.

At December 31, 2021, the Group had ceded reinsurance for 21.2 percent of its accepted premiums according to its annual accounts, and 11.4 percent in Solvency II technical provisions.

The appropriateness of the reinsurance management procedures is revised and updated at least annually.

The Corporate Actuarial Office issues a report at least once per year expressing its opinion of the Underwriting Policy, the sufficiency of the rates and the technical provisions, as well as the suitability of the reinsurance coverage obtained.

Concentration

The MAPFRE Group's underwriting risk is well-diversified, as it operates in virtually all insurance business lines in Spain and has an extensive presence in the international markets.

The Group applies limits that enable it to restrict the concentration of underwriting risk and has recourse to reinsurance contracts to reduce the underwriting risk arising from concentrations or accumulations of guarantees exceeding the maximum acceptance limits.

The greatest exposures to underwriting risk arise from natural or man-made disasters. In Spain, this risk is mitigated by the Insurance Compensation Consortium, which covers extraordinary risks deriving from natural phenomena and terrorism.

Furthermore, specific supplementary reinsurance coverage is obtained in addition to the catastrophic protection systems required by each country's legislation to mitigate catastrophic risk. Companies (where applicable due to exposure to risk type) have access to specialized catastrophic exposure reports, which are generally prepared by independent experts, which estimate the scope of losses should a catastrophic event occur. Catastrophic risk underwriting takes place based on the above information, the underwriting company's economic capital, as well as the reinsurance mitigation capacity contracted.

Transfer of risks to companies with special tasks

The MAPFRE Group does not transfer underwriting risks to special task companies.

C.2. Market risk

Market risk is the risk of loss or adverse modification of a financial situation, directly or indirectly arising from fluctuations in the volatility and level of market prices of assets, liabilities, and financial instruments.

Exposure

Below is a breakdown of the Group's investments by asset category after applying the transparency⁸ approach to undertakings for collective investment and other investments in the form of funds:

Investments	Investments at 12/31/2021	(%) Investments	Investments at 12/31/2020 ⁹	(%) Investments
Real estate investments	2.972,60	8,3%	3.090,68	7,1%
Financial investments	33.038,46	91,7%	40.647,01	92,9%
Fixed income	25.474,34	70,7%	33.747,30	77,2%
Equities	2.773,74	7,7%	2.636,83	6,0%
Mutual Funds and other collective investment bodies	228,82	0,6%	228,14	0,5%
Holdings in related companies	3.960,04	11,0%	3.427,30	7,8%
Hedging derivatives	506,51	1,4%	524,60	1,2%
Other investments	95,00	0,3%	82,84	0,2%
Total	36.011,06	100,0%	43.737,69	100,0%

Figures in millions of euros

⁸ According to article 84 of Delegated Regulation (EU) 2015/35, the required solvency capital will be calculated based on each underlying asset of undertakings for collective investment and other investments in the form of funds.

It should be noted that as of December 31, 2021, 92.5 percent of fixed income investments have a credit rating classified as investment grade, 69.1% being sovereign public debt (45.8% sovereign debt of Spain). A notable decrease in the volume of fixed income is observed due to the exit of BANKIA VIDA from the Group scope.

The market risk at December 31, 2021 represents 48.6 percent of the total risk modules included in the SCR. The following charts show the variation with respect to the previous year:

Management and mitigation techniques

The MAPFRE Group mitigates its exposure to the market risks through: i) a prudent investment policy, with a strong proportion of investment-grade fixed income securities and high credit ratings, ii) monetary congruence between assets and liabilities, iii) and by establishing general and specific exposure limits (established in the Investment Plan approved by the Board of Directors, which is revised at least annually).

Four different types of portfolios are managed within the investment portfolio:

- Immunized: portfolios seeking strict immunization of the commitments arising from insurance contracts.
- Unit-linked: portfolios that cover only unit-linked policies.
- Active conditioned management: portfolios that seek to surpass profitability commitments and gain increased profit sharing for insured parties within the prudence parameters, such as profit-sharing portfolios that are not included within immunized portfolios.
- Freely managed: portfolios with active management, which are only conditioned by legal regulations and internal risk limits.

In the first case, immunized portfolios reduce interest rate risk, through matching adjustments based on immunization techniques using cash flow matching or duration.

In the second case, portfolios that cover the unit-linked policies are made up of financial instruments whose risk is assumed by the insured parties.

The rest assume a certain degree of market risk, considering the following mitigation aspects:

- A modified-duration interest rate risk management variable is contingent on the limits established in the Investment Plan for the free-management portfolios, and the modified duration of liabilities in the event of long-term commitments with insured parties.
- The differential and concentration risk are mitigated by the higher proportion of fixed income securities with a credit score classified as investment grade and through diversification by issuers.

- Investments in assets are subject to a maximum limit of the investment portfolio and to limits per issuer.
- Exposure to exchange rate risk is minimized in the case of insurance liabilities. Exposure to this type of risk may not exceed a fixed percentage established in the annual Investment Plan, for investment management reasons only. There should be a correlation between the currencies in which the assets and liabilities are denominated, making it possible to use other currencies which are closely correlated, where necessary.
- In the case of property risk, it is notable that 48.5 percent of the property portfolio at market value is for own-use offices.
- Risk limits are set in quantitative terms, determined based on easily observable variables. However, a risk analysis in probabilistic terms is carried out in accordance with past volatility and correlations.

Concentration

The highest concentration of investment is in Spanish public debt.

C.3. Credit risk

Credit risk is the risk of loss or adverse modification of a financial situation arising from fluctuations in the solvency of value issuers, counterparties, and any other debtors to which insurance and reinsurance companies are exposed, materializing as counterparty non-compliance, spread, or market risk concentration,

Exposure

Credit risk under the SCR standard formula calculation includes:

- The differential and concentration risk recognized in the present report in section C.2 Market risk.
- Counterparty non-compliance risk is broken down into two types of exposures:
 - Tier 1 exposure: includes, among others reinsurance contracts, swaps, bank balances, in which companies generally have credit ratings.
 - Tier 2 exposure: includes accounts receivable from intermediaries, and policyholder debts, among others.

Counterparty non-compliance risk as at December 31, 2021 represents 6.9 percent of the total risk modules included in the SCR, staying the same with respect to the previous year, as shown in the following charts:

In addition, the evolution in the composition of each of the types of exposures is shown in the following charts:

The exposure to accounts receivable from intermediaries (type 2) that are overdue for more than three months has been reduced.

Management and mitigation techniques

The Credit Risk Management Policy establishes exposure limits according to the counterparty's credit rating, as well as a system of monitoring and notifying the exposure to this risk.

The Group's strategy regarding reinsurance counterparties focuses on granting business to reinsurance companies with proven financial track records with a financial solvency rating of no less than "High" (credit score level of 2). The Group Security Committee monitors main exposures to reinsurance counterparties.

The basic mandatory compliance principles that inspire the management of the use of reinsurance and other risk mitigation techniques are the optimization of conditions and capital consumption, the solvency of the counterparties, the effective transferability of risk, and the suitability of the level of risk transfer.

Concentration

The greatest exposures to the risk of counterparty non-compliance are found in finance and reinsurance companies, with counterparty credit rating limits established and monitored.

C.4. Liquidity risk

Liquidity risk is that under which the insurance and reinsurance companies may not be able to materialize their investments and other assets in order to meet financial commitments at maturity.

Exposure

Liquidity risk is not included in the SCR standard formula calculation. Exposure to liquidity risk is low, taking into account the prudent investment strategy established in the Investment Policy, which is characterized by a high proportion of highly-quality fixed income securities that are listed on liquid markets.

Additionally, in extreme events, liquidity risk is minimized using the reinsurance as a technique for reducing the concentration of underwriting risk and the selection of highly rated reinsurers.

Management and mitigation techniques

The Group has a Liquidity Risk Management Policy and an Asset and Liability Management Policy which represent the framework of reference for handling liquidity risk management. The Liquidity Risk Management Policy sets forth that the companies must have at all times a sufficient volume of high-quality liquid assets, available credit lines and expected inflows of cash to cover its expected cash outflows of cash for each of the following 30 days.

The general action is based on maintaining balances in cash for sufficient amounts to cover the commitments derived from the obligations with the insured parties and creditors. Thus, as on December 31, 2021, the balance in annual accounts of cash and other equivalent liquid assets amounted to 2.89 billion euros (2.42 billion euros in 2020), equivalent to 7.2 percent of total financial investments and cash.

For Life and Savings insurance, the applied investment policy of matching the maturities of the investments with obligations in the insurance contracts reduces the long-term liquidity risk.

Additionally, most of the fixed income investments have high credit ratings and are traded on organized financial markets, which grants a great deal of leeway for action in the face of potential liquidity tensions.

Concentration

No liquidity risk concentrations have been identified.

Expected profits included in future premiums

In calculating the best estimate of the technical provisions, the expected benefits included in the future premiums have been taken into account (like the lesser value of the greatest estimate in case of being positive or the greatest value in case of expected losses). As on December 31, 2021, the amount of these expected profits totaled 1.24 billion euros net of reinsurance.

C.5. Operational risk

Operational risk is the risk of loss arising from the unsuitability of or errors in the internal processes, personnel, systems, or external events.

Exposure

The operational risk at December 31, 2021 represents 9.0 percent of the total risk modules included in the SCR. The following charts show the variation with respect to the previous year:

Management and mitigation techniques

The operational risk management model is based on a dynamic qualitative analysis of processes, so that each area/department manager identifies and evaluates the potential risks affecting both business processes as well as support processes.

The analysis encompasses the self-assessment of risks, documentation featuring internal control manuals identifying controls associated with risks, evaluations on control effectiveness, and the use of corrective measures established to mitigate/reduce risks and/or improve the control environment.

Furthermore, the Group has implemented the recognition of operational loss events for categorization and monitoring.

Thus, MAPFRE has systems for operational risk monitoring and control, although the possibility of experiencing operational losses cannot be excluded given the difficulty of forecasting and quantifying this type of risk.

In the risk and control monitoring developed in 2021, it has been observed that the criticality of the risks and the effectiveness of the controls linked to the risk indicators are within the acceptable levels established in the MAPFRE Group.

Concentration

No operational risk concentrations have been identified, except for the computer systems that the Group uses to manage and underwrite its insurance policies. A prolonged unavailability of these systems could have a negative impact on operations, but this possibility is considered remote, since there are proven mechanisms of business continuity that would mitigate the risk.

C.6. Other significant risks

In addition to the quantitative treatment of Solvency II risks, and as part of the annual risk identification process, the Corporate Risk Office promotes the identification of the material risks faced by the Group among the main areas or departments of the MAPFRE Group during the period covered by its business plan, as well as the emerging risks that both the insurance industry and MAPFRE may face in the longer term (5-10 years).

C.6.1 Material risks

The main risks that have been identified as material risks in the period covered by the business plan and that could significantly affect Group results are detailed below.

Cybersecurity and ICT systems failures risk

The volume and sophistication of malicious cyber activity has increased substantially, posing an ongoing challenge to maintaining security levels for corporate data and critical systems. Cloud computing presents high risks due to increased concentration and accumulations. From an operational point of view, there are risks of cyberattacks that can lead to extended loss of availability of services provided to third parties, as well as massive fraud against customers using their confidential information that could have been previously compromised.

Additionally, the change in the uses and habits of customers, the digitization and the self-service models have increased the demand for identification and authentication systems, the use of biometric identifiers and the multiple uses of identifiers, which in turn increase the risk of phishing fraud or even data theft. At the same time, there is an increased threat of cyberattacks organized from countries or nations, especially in today's turbulent geopolitical environment, in which organized hacker groups attack critical infrastructure, steal valuable data or confidential information from companies.

MAPFRE is exposed to Cyber Risks since the Group carries out its business activity, including data management and control, in a digital or "Cyber" environment. There are risks arising from the use, processing and transmission of electronic data through information systems, communications networks and the Internet itself, potential damage caused by attacks, as well as fraud committed by the inappropriate or improper use of data. In addition, the generalized confinement due to the COVID-19 pandemic and the massive adoption of remote work measures, extended the access routes to the Group's computer resources, which forced the adoption of additional technical and organizational measures to allow secure access and also guarantee protection in interactions with policyholders.

On the other hand, the increase in attacks and the growing demand for protection and cybersecurity by customers has been reflected in the development of products and services (adapting the products that are marketed including coverage of losses caused by Cybercrime and digital threats), as well as the provision of support and advice to clients to manage Cyber Risks.

In order to respond to cybersecurity needs, MAPFRE has advanced capabilities aimed at increasing operational resilience, with the following aspects promoted by the Corporate Security Office:

- Highly specialized and accredited personnel in charge of identifying, defining, designing, implementing and operating both the different security controls and the technological tools to protect the company's assets.
- Specific technologies for monitoring, detection and protection against security incidents, integrated into the operational technology platform.
- Tools, methodologies and specialists dedicated to continuously reviewing and evaluating the company's level of cybersecurity.
- A General Control Center (CCG-CERT), integrated into the FIRST network and into the CSIRT.es group. It receives alerts of attacks and global threats for the continuous monitoring (24 hours, 7 days) of both the security situation of MAPFRE's technological platform and its proprietary information accessible in third-party systems, enabling the early detection of possible Cyber-Incidents and an agile response to them. The CCG-CERT is certified in the ISO 9001, ISO 27001 and ISO 22301 standards.
- Business Continuity Plans, systematically updated, certified and trained.
- New push for the development and evolution of the Cybersecurity Culture, through the launch of the Corporate Awareness and Training Plan in this area, which covers the the entire MAPFRE Group and will be developed over the next three years.

- MAPFRE S.A. has a Cybersecurity Insurance Policy that covers various Cybersecurity Risks for all Group companies.

In 2021, the MAPFRE Group Cyber Resilience Plan was approved, resourced and implemented, articulating the evolution and improvement of the MAPFRE Group's position in terms of Cyber Security, Privacy, Data Protection and Digital Operational Resilience and becoming the backbone of cyber risk mitigation measures in the company.

Inflation

The high inflation (current rise in the level of consumer prices) has its origin in the offer (with special mention to the direct impact through the energy component and other inputs that feeds back the initial problem of bottlenecks). Therefore, as a potential risk, there could be effects on wages in the short and medium term and upward revision of inflation expectations in the long-term.

From the point of view of the (re)insurance sector, the risk of inflation comes from unanticipated levels that have a general impact on the non-life business through an increase in claims expenses. Likewise, to the extent that inflation is persistent, it could cause an increase in interest rates that would reduce the value of the financial investments of companies, particularly affecting life companies.

In any case, an increase in inflation entails a loss in families' purchasing power, so its impact could affect the subscription of new products, both life and non-life.

To counteract this situation, MAPFRE applies prudent risk selection and pricing, and an investment policy characterized by a proportion of fixed income with returns linked to local inflation or the official rate of return of central banks, that allows to have sufficient resources to meet the policyholders' needs even in of unforeseen inflationary situations.

Regulatory changes

The (re)insurance business is a heavily regulated activity whose primary purpose is to protect policyholders. Legislative changes may i) imply a risk if the Group is unable to adapt to them, or ii) affect the Group's operations to the extent that the supervisory authorities have extensive administrative control over various aspects of the insurance business.

Among the legislative changes stand out the entry into force in 2023 of the new criteria established in the International Financial Reporting Standards adopted by the EU ("IFRS-EU") 17 "Insurance Contracts" and 9 "Financial Instruments", which represent a significant change in the valuation and presentation of the financial statements.

With respect to IFRS-EU 17, the Group is developing a new technological architecture and implementing new processes and guidelines that address all the aspects established by the standard, and designing new data models and new corporate systems. Throughout the year 2022, the development of the operating systems will be completed, and the implementation will be carried out, with integrated testing and user training. Likewise, parallel executions will be carried out and the transition balance sheet will be prepared.

The adaptation to the IFRS-EU 9 is being carried out in parallel with IFRS-EU 17, with the same processes, procedures and governing bodies, both at corporate level (Management Committee and Corporate Implementation Committee) and at local level (Local Implementation Committees). The latter aimed at companies that have to submit information on the valuation of their insurance contracts under IFRS and that consolidate their financial statements with MAPFRE, S.A.

Similarly, the Group has worked on the definition of the business models established by IFRS-EU 9 and has established the documentation that companies must complete in each financial asset purchase

operation for the classification of investments. Although the standard does not require that comparative figures to be presented, the MAPFRE Group plans to restate the figures for the 2022 financial year in order to improve the comparability of the consolidated annual accounts.

Personnel management and organization

Personnel risk considers the possible losses due to inadequacy or failures originating from i) the lack of education, experience and training of the company's employees; ii) non-adaptability of personnel to the company's vision, mission, and values; iii) aspects related to the size of the departments or structure; or iv) affecting the health and safety of employees.

Talent management is always a concern at MAPFRE. In today's environment of continuous transformation, it is necessary to provide the organization with greater flexibility and technical know-how to face a changing society.

Throughout 2021, the Group has launched an incentivized voluntary redundancy plan aimed at employees of its insurance operations in Spain. At June 30, the Group recorded a provision for an approximate amount of 75 million euros. Additionally, in December, an extension of the voluntary exit plan was carried out for an amount of 100 million euros, in order to accelerate the transformation processes of MAPFRE's operating model in IBERIA.

During the last quarter of the 2021 financial year, VERTI Italia launched a restructuring plan based on a broad organizational change. This plan is based on two fundamental axes, i) digitize and automate the company's processes, taking advantage of the investments made in technology to drive profitable growth with the digital-direct business becoming its main activity, and ii) adjusting the structure of the organization to the new size of the company, after the exit of some unprofitable businesses. This plan is in its final phases of definition and could entail a significant reduction in the personnel structure in the different areas of the company, which would be carried out by relocating employees to service providers, incentivized dismissals and other termination measures of the employment relationship. The net cost of this plan amounts to 19.9 million euros.

People management at MAPFRE is based on three pillars: the development of talent, the transformation of the organization and the promotion of the employee experience and the channels of communication and transparency towards the employee.

Risk of new competitors

The risk of new competitors includes the risks derived from the loss of positioning and the inability to react to changes in the market and the emergence of new players.

The Group competes in local and global markets with insurance companies, banks, brokers, asset management companies and financial services. In addition, there could be the entry of new competitors with more advanced technological profiles that include new disruptive technologies.

The strategic initiatives of the MAPFRE Group launched in relation to Digital Transformation, Customer Orientation and Excellence in Technical and Operational Management have made it possible to face this risk. From an operational and technological point of view, a culture of continuous transformation has been developed to enable the Group to adapt to a changing and uncertain reality, with new organizational and operational models, strategic and disruptive innovation lines, open innovation processes and the digital challenge in the field of culture, talent and work environments.

The above is supported by the establishment and use of advanced data analytics that enables the understanding of customer needs, the optimization of customer retention arguments and the monitoring of consumer behavior and the main competitors in the market.

C.6.2. Emerging risks

Emerging risks are expected or possible risks, changes in the current risk profile due to future events whose impacts are unknown or subject to great uncertainty.

Although both the solvency position and the Group's internal control and risk management systems are solid, considering that the risk landscape is constantly evolving, it is important to identify the factors that both the insurance industry and MAPFRE may face in the long-term (5-10 years), to know the degree of preparation available, and to be able to adapt to achieve the objectives and success in business results.

The main emerging risks are detailed below, with a description of their possible impacts on the Group's businesses and the measures being adopted to respond to these risks:

Climate change risk

The climate change risk derives from the long-term change in the average weather patterns that have shaped the Earth's local, regional and global climates. This risk will manifest mainly in extreme climatic events (tropical cyclones, floods, forest fires, etc.), in economic uncertainty due to various changes (regulatory, technological, social, etc.), in the transition to a low-carbon economy and in environmental liability claims when climate risks are not prevented, mitigated or disclosed.

Risks from climate change fall into two broad categories: physical risks and transition risks. Among the risks derived from climate change identified by MAPFRE, are the following, according to the categories mentioned:

	Insurance underwriting portfolio	Insurance underwriting portfolio	Investment Portfolio (Asset Owner)	Investment Portfolio (Asset Manager)
Risk Typology	Acute physical hazard: Increased severity and frequency of extreme weather events	Current regulatory risk: Mandates and regulation of existing products and services.	Reputational risk: Changes in consumer preferences	Market Risk: Risk of asset stranding considered in making investment decisions
Temporal horizon	Medium term	Short term	Medium term	Medium term
Main potential impact financial	Increased liability for insurance claims	Decrease in revenue due to reduced demand for products and services	Decrease in the value of assets or their useful life, leading to depreciation, impairment of assets or early retirement of existing assets	Decrease in the value of assets or their useful life, leading to depreciation, impairment of assets or early retirement of existing assets
Impact magnitude	High	Medium	Medium -high	Medium -high
Probability	Very likely	Very likely	Likely	Very likely
Details	<p>As a global insurance company, MAPFRE and its clients around the world are exposed to the physical risk that climate change may bring about. Changes in the physical parameters of the atmosphere influence the increased probability and impact of damage caused by extreme weather events</p> <p>MAPFRE's presence in countries with a high possibility of catastrophes (floods, tropical cyclones, snowfall, etc.) requires a special focus on these risks. The damage caused by natural catastrophes gives rise to the payment of compensation by MAPFRE to its clients, which, depending on its amount, can have a significant effect on the balance sheet. In addition, MAPFRE has buildings, offices and employees throughout the world that may also be affected by the increase in the frequency and intensity of natural disasters.</p>	<p>The decarbonisation of the economy, following the Paris Agreement, could change the way of life in Europe due to the development of ambitious and greener strategies such as the European Green Deal, the European Taxonomy for Sustainable Investments, the regulation of the Circular Economy, disclosures related to Natural Capital, etc.</p> <p>In Spain, the Law on Climate Change and Energy Transition provides for changing the use of private vehicles to improve ECO mobility. This regulation is decisive to promote urgent changes in mobility in order to electrify it. This "new mobility" will mean the prohibition of some journeys, for example, the driving to the largest urban centres of polluting vehicles. These changes are pushing customers to change the way they move around and buy goods and services.</p>	<p>The number of sustainable products available on the market has multiplied in recent years, significantly increasing the growth of green assets. Sustainable value considers environmental, social and corporate governance (ESG) factors that are attractive to investors.</p> <p>One of MAPFRE's objectives from a financial point of view is to manage its assets considering the commitments and risks assumed, and to this end, in the management of the real estate portfolio, applies the Principles of Responsible Investment, considering energy efficiency and environmental sustainability criteria. This principle is present and is permanently promoted in the management of the Group's real estate assets and in new real estate investments, through Sustainable Building Certifications and Management Systems under ISO standards (ISO 14001 and ISO 50001).</p>	<p>Reaching the goal of limiting climate change to less than two degrees of warming would require keeping a large proportion of existing fossil fuel reserves in the ground. It is estimated that a third of oil reserves, half of gas reserves and more than 80% of known coal reserves would need to remain unused to meet global temperature targets under the Paris Agreement.</p> <p>The value of "stranded assets" may not be fully reflected in the value of companies that extract, distribute or rely heavily on fossil fuels, which could result in a sudden drop in such assets if this risk is factored in. A variety of risk factors could lead to assets being stranded. These include: new government regulations limiting the use of fossil fuels (such as carbon pricing); a change in demand (for example, a shift to renewable energy due to lower energy costs); or even legal action. MAPFRE, as an investor and insurer, is exposed to these risks of stranded assets..</p>

The management of the risks derived from climate change focuses, fundamentally, on increasing the understanding of the greater catastrophic risk derived from climate change and improving the management of exposures through:

- Incorporating the climate in the decision-making of the business strategy.
- Detailed knowledge of the insured risks (such as their geolocation and the characteristics of their assets), in order to make a correct selection of catastrophic protection.
- Adequate management and control of accumulations to optimize the use of capital.
- Maximum collaboration and transparency between the insured and the insurer, to facilitate the best risk assessment and pricing.
- Taking out reinsurance coverage.

Product and service risk

The high volatility and speed of changes in the environment, in society and in the markets in which MAPFRE operates (e.g. aging, digitization, large cities, new regulations, conflicts, the appearance of new competitors, etc.) produce drastic changes in customer behaviors and changes in demand.

The Group is exposed to the continuous need to adapt products and services to meet the future needs of customers, with the consequent loss of position in the market and impact on results if this is not achieved.

The entry of large technology companies, as new competitors not subject to specific regulation, can have a negative effect by encouraging the assumption of greater risks in order to compete in attracting customers.

Although the Group aims to maintain a technically adequate pricing policy, if its product portfolio is not competitive with the variety and prices offered by its competitors, its business, revenues, operating results and financial position, as well as its reputation, could be negatively affected.

The Group manages this risk through the development of strategic initiatives related to Digital Transformation, Customer Orientation, and Excellence in Technical and Operational Management.

From the point of view of technical and operational management, there are global models of operational efficiency that ensure the quality perceived by the customer through more homogeneous processes, more integrated into common technology solutions and improvements in self-service, shared service centers, and automation with great advances in terms of performance, digitization and flexibility to offer immediate responses. To this end, the use of advanced data analytics is enhanced to enable continuous analysis of customer needs in order to adapt the offer and optimize customer retention arguments.

To prepare for the new challenges, the Group's strategic plan for the years 2022-2024 has set targets to:

- Improve the integrity of customers, increasing the number of products per customer.
- Establish more customer-oriented processes, and continue with segmentation models and improvement of increasingly personalized value propositions, promoting the intensive use of data.
- Strengthen the most profitable distribution channels and seek new ways to reach potential customers, with special attention to new agreements with bancassurance, automobile manufacturers and maximizing the relationship with brokers.
- Consolidate own networks in the countries where they have been successfully developed, and reinforce the value proposition of the affected networks, promoting digital operations.

- Increase the weight of digital business, both in B2C and B2B2C, with agreements with digital partners, marketplaces and digital ecosystems.
- Further promote the use of the customer's web self-service.
- Implementation of technological platforms "as a Service", which allow a scalable use with flexible costs.

Risk of instability and financial crises due to conflicts and scarcity of resources

The Group is exposed in the long term to the triggering effects of socio-political risk, where drastic and very rapid changes are taking place, with a tendency to increase protectionism. The invasion of Ukraine by Russia, with the sanctions adopted by the European Union and the United States, and the economic and political influence of China are examples of this.

The COVID-19 pandemic, the Russia-Ukraine conflict and the sanctions and shocks to the economy, coupled with resource scarcity caused by climate change could have geopolitical implications by encouraging states to adopt more nationalistic policies, start new conflicts or aggravate existing ones. This could increase political instability and social unrest, which could spread quickly if it coincides with structural causes present in the economy and in society (high food and energy prices, water scarcity, high unemployment, income inequality and poor public services, etc.). If to the above is added the increase and maintenance of high inflation rates and the increase in the debt of the countries to face the various crises, it could lead to a decrease in purchasing power with the consequent contraction in the demand for insurance products.

The Group's long-term results may be affected by fluctuations in the financial markets in which it operates, by changes in exposure to interest rates that may reduce the contracting of products (life, savings), the profitability of investments, as well as the sufficiency of technical provisions and the increase in costs and loss ratio. Additionally, regulatory changes derived from conflicts can cause direct losses due to restrictions to operate.

MAPFRE tries to identify the aspects that may affect the Group socially and politically, as well as monitor the main macroeconomic and financial variables, with special emphasis on their impact on the insurance industry and on the financial strength of the Group.

C.7. Any other information

C.7.1. Sensitivity analysis of the significant risks

The Group performs sensitivity analyses of the solvency ratio involving certain macroeconomic variables, among which the following are worth mentioning:

- Interest rates (increases and decreases).
- UFR¹⁰ – Ultimate Forward Rate (decrease).
- Currency (Euro appreciation).
- Equity valuation (decrease).
- Corporate and sovereign spreads (increase).

The sensitivity of the ratio of solvency to the changes in these variables is shown below:

¹⁰ UFR is the long-term interest rate that is used as a reference to construct the curve of interest rates in the periods in which there are no longer any market indicators. The UFR used in the solvency calculations as at 31/12/2021 is 3.60 percent.

	December 31, 2021	Percentage points change
Solvency Ratio (SR)	206.3%	-
SR in the event of a 100 basis point increase in the interest rate	197.5%	-8.8 p.p.
SR in the event of a 100 basis point decrease in the interest rate	212.3%	5.9 p.p.
SR in the case of UFR (Ultimate Forward Rate) 3.45%.	206.1%	-0.2 p.p.
SR in the event of a 10% Euro appreciation	204.2%	-2.1 p.p.
SR in the event of a 25% decrease in equity	200.2%	-6.2 p.p.
SR in the event of a 50 basis point increase in corporate spreads	204.1%	-2.2 p.p.
SR in the event of a 50 basis point increase in corporate and sovereign spreads	196.4%	-9.9 p.p.

p.p.: percentage points

The sensitivity of the solvency ratio¹¹ to certain Life business variables has also been calculated:

	December 31, 2021	Percentage points change
Solvency Ratio (SR)	206.3%	-
SR in case of a 5% increase in the mortality ratio (products without a risk of longevity)	204.1%	-2.3 p.p.
SR in case of a 5% decrease in the mortality ratio (only products with a risk of longevity)	204.4%	-1.9 p.p.
SR in case of 5% increase in disability ratio	206.3%	0.0 p.p.
SR in case of a 10% increase in expenses	203.5%	-2.8 p.p.
SR in case of a 10% increase in losses	204.6%	-1.8 p.p.

p.p.: percentage points

The method applied to obtain results consisted of:

- Establishing a benchmark based on the economic situation, solvency capital required (SCR) and the solvency ratio at a certain date.
- Selecting the initial variables that would be affected by the application of the stress assumptions that have been defined for the various tests or scenarios.
- Determining the final effect on the solvency based on new values for the variables in question.

The results of these sensitivities show that the most relevant variables for Solvency Ratio purposes are:

- Increase in corporate and sovereign debt spreads.
- Increase in risk-free rates.
- Fall in equities.

In addition, sensitivity analyses are carried out of the solvency ratio through the non-application of the transitional measures of technical provisions and equity, as well as the non-application of adjustments

¹¹Only the effect on the eligible own funds has been calculated, not on the SCR.

for matching and volatility. The matching technique is an effective measure and good practice to mitigate interest rate risk. However, as shown in the table below, and due to the non-application of the diversification benefit, the Solvency II ratio would be higher if the matching adjustment was not applied. Nevertheless, the excess of own funds over the required capital increases as a consequence of applying this measure. The details of the impacts can be found in section D.2.2.

As on December 31, 2021, the accumulated impacts of the transitional measures and adjustments applied to calculate the solvency ratio were:

Solvency ratio 12/31/2020	206.3%
Impact of transitional measures on technical provisions	-10.9 p.p.
Impact of transitional measures on equity	-0.2 p.p.
Total ratio without transitional measures	195.2%

Solvency ratio 12/31/2020	206.3%
Impact of matching adjustment	+1.6 p.p.
Impact of volatility adjustment	-0.2 p.p.
Total ratio without matching and volatility adjustments	207.7%

p.p.: percentage points

C.7.2. Other issues

Off-balance-sheet positions

There are no significant exposures to the above risks arising from off-balance-sheet positions.

D. Valuation for solvency purposes

MAPFRE Group Solvency II consolidation scope

The calculation of MAPFRE Group's solvency under the Solvency II regulations as on December 31, 2021 was performed contemplating the following scope differences vs. those reflected in the consolidated annual accounts:

- a) Application of a combination of methods: method 1 based on accounting consolidation that covers all the companies apart from insurance companies based in the USA, Mexico, and Brazil, considered equivalent countries, to which method 2 is applied or the deduction and aggregation method.
- b) Exclusion of a group of companies that, both individually and overall, present an insignificant interest in the Group's supervision. Assets from companies not included represent an approximate 1.92 percent of the total assets of the MAPFRE Group's consolidated annual accounts.
- c) Companies with their own sector regulations (MAPFRE Inversión, S.V, MAPFRE Asset Management, etc.) are recognized in the consolidated annual accounts using the global integration method under Solvency II in the proportionate share of own funds calculated using sector methods.

In the 2021, the investment funds whose participation exceeds 20% and other collective investment managed by Group's companies have been consolidated by global integration in the annual accounts. However, in the balance sheet, the shares held in these funds have been included under the heading of *Shares in related companies*.

The 2021 annual accounts already consider the exit of BANKIA VIDA.

Based on the above, the following presentation of information relating to "Assets," "Technical provisions," and "Other liabilities" include three valuations in order to favor a comparison:

- "Solvency Value II" contains the assets and liabilities valued under the Solvency II regulation by considering the Solvency II consolidation scope. These regulations require the use of a coherent approach to fair/market value; for these effects the definition of fair value included in IFRS was used.
- "Adjusted book value" reflects the valuation of the different headings under IFRS standards, contemplating the Solvency II consolidation scope described above.
- "Financial statements book value" reflects the valuation of assets and liabilities in accordance with International Financial Reporting Standards as adopted by European Union (IFRS-EU), and remaining applicable mercantile legislation, which are the basis for the MAPFRE Group's consolidated annual accounts as on December 31, 2021, prepared by the Board of Directors during its meeting held on March 9, 2022.

The discrepancies arising from a comparison of the "Financial statements book value" and "Adjusted book value" are due to the difference in scope, consolidation method for certain companies, and the above-mentioned reclassifications.

Appendix I lists the companies included in the Group's scope and the consolidation methods applied using the Solvency II consolidation scope at December 31, 2021.

D.1. Assets

The model balance sheet of December 31, 2021 presented is adjusted to Solvency II regulations, and therefore it was necessary to reclassify the data included under "Financial statements book value" since each model structures its balance sheet differently. Thus, differences in classification arose under certain headings between the data included in the consolidated annual accounts and those reflected under "Financial statements book value."

Assets	Solvency II value	Adjusted book value	Financial statements book value
Goodwill		1,452.63	1,472.54
Prepaid commissions and other acquisition costs		995.88	1,750.51
Intangible assets	0.00	1,090.28	1,438.81
Deferred tax assets	2,740.33	1,471.37	299.61
Pension benefit surplus	173.44	173.44	173.44
Property, plant and equipment held for own use	1,378.17	1,048.27	1,295.07
Investments (other than assets held for index-linked and unit-linked contracts and other collective investment institutions)	34,216.44	34,524.64	38,324.09
Property (other than for own use)	1,376.32	1,036.08	1,260.06
Holdings in related undertakings, including participants	3,829.15	4,500.08	656.97
Equities	1,499.39	1,499.58	3,051.78
Equities — listed	1,440.58		
Equities — unlisted	58.82		
Bonds	24,760.76	24,739.21	30,496.38
Government Bonds	17,636.60		
Corporate Bonds	6,260.28		
Structured notes	839.11		
Collateralized securities	24.76		
Collective Investments Undertakings	1,529.05	1,529.11	1,877.98
Derivatives	715.37	715.37	420.56
Deposits other than cash equivalents	506.4	505.22	
Other investments	0.00	0.00	560.35
Assets held for index-linked and unit-linked contracts and other collective investment institutions	2,448.07	2,448.07	2,957.26
Loans and mortgages	34.56	34.43	83.84
Loans on policies	17.27		
Loans and mortgages to individuals	0.01		
Other loans and mortgages	17.29		
Reinsurance recoverables from:	3,469.10	4,493.99	6,084.69
Non-Life and health similar to Non-Life	3,419.29	4,414.57	6,005.60
Non-Life excluding health	3,422.07		
Health similar to Non-Life	(2.78)		
Life and health similar to life, excluding health and index-linked and unit-linked and other collective investment institutions	49.8	79.41	79.09

Assets	Solvency II value	Adjusted book value	Financial statements book value
Health similar to Life	0.09		
Life excluding health and index-linked and unit-linked and other collective investment institutions	49.71		
Life index-linked and unit-linked and other collective investment institutions	0.00	0.00	0.00
Deposits to cedants	836.32	836.66	835.02
Insurance and intermediaries receivables	1,373.03	2,107.37	3,891.96
Reinsurance receivables	383.3	377.8	791.73
Receivables (trade, not insurance)	352.49	352.54	911.02
Own shares (held directly)	62.94	62.94	0.00
Amounts due in respect of own funds items or initial fund called up but not yet paid in	0.00	0.00	0.00
Cash and cash equivalents	2,353.41	2,352.48	2,887.69
Any other assets, not elsewhere shown	195.29	218.38	657.01
TOTAL ASSETS	50,016.89	54,041.16	63,854.29

Figures in millions of euros

Following are the significant asset valuations using Solvency II criterion, including qualitative explanations for the main differences arising from their valuations using Solvency II and those used in preparing the annual accounts at December 31, 2021. The valuation relating to headings which do not present differences between the criteria established in IFRS and Solvency II are set out in MAPFRE Group's 2021 consolidated annual accounts.

Goodwill

According to Solvency II criteria, Goodwill is valued at zero, unlike under IFRS criteria, where it is valued at cost adjusted for any possible impairment.

Prepaid commissions and other acquisition costs

The economic valuation of the flows related to Acquisition Costs is comprised by a portion of the Technical Provisions valued using Solvency II criteria, vs. their presentation under applicable IFRS legislation, in which they appear broken down under this heading.

Intangible assets

As regards the Solvency II balance sheet, recognition of Intangible Assets unrelated to Goodwill must be done at a value other than zero only if they may be sold separately, and the existence of a market value for the same or similar assets may be demonstrated. The MAPFRE Group mainly recognizes software and portfolio acquisition expenses under this heading, which it considers do not meet the conditions established in the above solvency regulations, and therefore they are presented at a zero value.

Deferred tax assets

In accordance with Solvency II regulations, the deferred taxes corresponding to all assets and liabilities that in turn are recognized for tax or Solvency purposes are recognized and valued. These deferred taxes are valued as the difference between the values assigned to the assets and liabilities recognized

and valued in accordance with Solvency II and the values assigned to them as they are recognized and valued for tax purposes.

In this regard, each individual company that is part of the Group determines the deferred tax assets (applying the tax rate corresponding to all differences between the accounting and solvency values) which are subsequently added to the consolidated balance sheet for Solvency II purposes for MAPFRE Group. In the consolidation process, corresponding deletions are made and, in addition, deferred tax assets resulting from goodwill and intangible assets arising in this process are recognized.

Under IFRS, deferred taxes correspond to the timing differences that arise as a result of the existing differences between the tax bases of assets and liabilities and their book values. Based on the IFRS consolidation process under the Solvency II scope, the MAPFRE Group's deferred tax assets totaled an adjusted book value of 1.47 billion euros.

The difference between the "Solvency II Value" and the "Adjusted Book Value" of deferred tax assets is mainly explained by the valuation differences of goodwill, intangible assets and the technical provisions.

Property, plant and equipment held for own use

In accordance with Solvency II criteria, property, plant and equipment must be valued at fair value. For the purposes of determining the fair value of Property for own use, the market value corresponding to the appraisals carried out periodically by authorized independent appraisal entities, in accordance with the provisions of the supervisory bodies, is considered as the market value. Under IFRS, property, plant and equipment for own use is recorded at the cost of acquisition or production corrected by accumulated depreciation and, if applicable, the accumulated amount of impairment losses.

Since the entry into force of the IFRS 16 leasing standard in January 2019, there has been a significant change in the valuation criteria of the assets and liabilities of the economic balance sheet when collecting the impact of the application of said standard.

For this reason, the valuation difference between the two valuation criteria represented the recognition of the higher value of Property in the Solvency II balance sheet in the amount of 329.90 million euros, compared to the "Adjusted book value."

Investments (other than assets held for index-linked contracts, mutual funds and other collective investment institutions)

All investments must be measured at fair value on the Solvency II balance sheet, regardless of the accounting portfolio under which they are classified. The determination of fair value is performed by following the same procedures and methodology used for determining fair value based on IFRS 13 "Fair Value Measurement".

Thus, IFRS 13 defines the fair value as "the price that would be received from selling an asset or a liability is paid by transfer in a transaction ordered between participants on the market at the date of valuation." A fair value valuation assumes that the transaction will take place on the main asset or liability market, or in the absence of a main market, in the most advantageous market using valuation techniques that are appropriate to the circumstances and for which sufficient data are available, maximizing the use of relevant observable variables and minimizing the use of non-observable variables.

To increase the consistency and comparability of fair value measurements, IFRS 13 establishes a hierarchy of fair value that allows the variables of valuation techniques used to measure fair value to be classified into three levels: Level 1 corresponds to quoted prices on unadjusted active markets; Level 2 uses observable data (either quoted prices on active markets for instruments similar to the one being valued, or other valuation techniques in which all significant variables are based on observable market

data); and Level 3 uses case-specific variables, although the latter level includes assets of little relevance.

Although not all assets and liabilities have available observable market transactions or market information, in any case the objective of a fair value appraisal is always the same: estimate the price for an orderly transaction for selling the asset or transferring the liability between market participants at the valuation date in present market conditions.

Under this heading, and based on the Solvency II balance sheet, the following investments are included:

- ***Property (other than for own use)***

This category includes Property, which is not considered for own use, and is used to earn payments, capital gains, or both. In accordance with Solvency II criteria, property plant and equipment is measured at fair value; under IFRS, it is recognized at acquisition or production cost, corrected by the cumulative amortization, and where applicable, the accumulated amount of impairment losses.

The difference between the Solvency II and IFRS valuation criteria represented the recognition of the higher value of properties in the Solvency II balance sheet in the amount of 340.24 million euros vs. the "Adjusted book value." This estimate is based on appraisals performed by independent experts.

- ***Holdings in related companies***

In accordance with the Solvency II regulations, all related companies in which there is shareholding or over which there is a controlling or significant influence are considered to be Subsidiaries and holdings.

The 4.50 billion euros reflected under "Adjusted book value" mainly corresponds to insurance companies located in the US, Mexico, and Brazil (for which the MAPFRE Group is authorized to apply the deduction-aggregation method for calculating solvency), investments in companies subject to other sector supervision regulations and other associated companies, and mutual funds holdings whose stake exceeds 20 percent and other collective investment institutions managed by Group companies. On the other hand, in the Annual Accounts, the above companies are consolidated by global integration, for which the value of the shares in related companies is 656.97 million euros.

Wherever possible, investments in related companies are measured at their listed prices on active markets as regards the Solvency II balance sheet. However, due to the absence of quoted prices on active markets, the following specificities were considered for the purposes of solvency:

- Investments in companies subject to other sector supervision regulations included under regimes considered equivalent were valued contemplating own funds determined under their respective supervisory regulations (see Section E.1.2).
- Investments in insurance companies which are not subject to control were measured using the adjusted equity method based on own funds determined under the supervision method.
- Investments in other companies were valued under the adjusted equity method on own funds determined under IFRS, adjusted by eliminating goodwill and intangible assets.

Under IFRS, holdings in related companies are consolidated via the equity method, with net goodwill as of the acquisition date included in the equity value.

As a result of the difference in the valuation criteria for these investments, a lower value is recognized between the Solvency II balance sheet and the 670.93 million euros of the "Adjusted book value."

- **Bonds**

As a result of the fact that some entities (those considered to be from equivalent countries, those with their own sector regulations and those excluded from the scope of supervision of the Group) are consolidated differently in Solvency II (method 2 or proportional part of own funds) with respect to Annual Accounts (global integration of assets and liabilities), the volume of bonds is reduced by 5.78 billion euros in the Adjusted Accounting Balance with respect to the Annual Accounts.

The MAPFRE Group, as a general criterion, classifies its financial investments in fair value portfolios (portfolio available for sale and trading portfolio). However, accounting residually presents financial investments that come from subsidiaries outside the EEA (European Economic Area) classified in the held-to-maturity portfolio, which are valued at amortized cost using the effective interest method and reduced, where appropriate, for possible impairment. The valuation differences between Solvency II and the Adjusted Accounting Balance are mainly due to the effect of the market valuation of these assets classified in the due date portfolio.

Loans with and without mortgage guarantee

For the purposes of the Solvency II balance sheet, when calculating the value of amounts recoverable from loans the future flows have been updated by applying a discount rate resulting from the sum of the risk-free curve at the valuation date that includes a spread representing the risk of the borrower not making repayment.

Amounts recoverable from reinsurance

On the Solvency II balance sheet, the calculation of the recoverable amounts of reinsurance is in line for that of the calculation of the direct insurance technical provisions and accepted reinsurance, which means that these amounts are registered at their best estimate, also considering the temporary difference between collection and direct payments, as well as the expected losses from the counterparty's lack of compliance. Intra-group operations were also netted.

The following aspects were taken into account when determining the recoverable value of the amounts of reinsurance arising from amounts considered in the technical provisions:

- The expected value of potential reinsurance default based on creditworthiness and the time horizon of expected payment patterns.
- Expected reinsurance collection patterns based on past experience.

For reinsurance recoveries extending beyond the established payment period outlined in reinsurance contracts, a renewal of current contractual terms is contemplated, with no substantial modification to them nor to the contracted cost or coverage.

Both classification of the different reinsurance businesses, and the development of the loss experience, are based on the hypothesis carried out for the direct insurance and accepted reinsurance with respect to the technical provisions.

The value of the potential recovery of reinsurance arising as a result of the technical provisions for direct insurance is directly linked to estimates and projections for future cash flows which might be subject to many factors of uncertainty, which are mainly:

- Development of loss experience for direct insurance and accepted reinsurance to which reinsurance contracts are linked.
- The ability to meet the reinsurer's future payment commitments.
- Reinsurance payment pattern.

Under IFRS, technical provisions for cessions to reinsurers are presented in the asset side of the balance sheet, and are calculated in accordance with the reinsurance contracts underwritten and using the same criteria applied to direct insurance and accepted reinsurance (for more information, see section D.2 "Technical provisions").

Receivables from insurance and intermediaries

In accordance with the Solvency II criteria in the value of Loans with insurers and intermediaries (including accepted reinsurance), the time effect implicit in such loans has been considered to not be relevant, and the estimates of possible defaults on loans by insured parties for outstanding receipts are thought to adequately reflect their economic value (which only include those rights arising from receipts effectively issued and submitted for collection).

The future cash flows from receipts pending issuance corresponding to insurance obligations within the framework of the contract limit, are considered as part of the calculation of the technical provisions. Thus, the Best Estimate of Liabilities (BEL) calculation already takes into account the incoming flows through premium receipts paid in installments. Thus, these are eliminated from "Receivables from insurance and intermediaries."

The valuation differences between Solvency II criteria and IFRS arise as a result of the existence in some MAPFRE Group companies of policies with premium payments in installments. Under IFRS, Provisions for unearned premium are determined as if the premium was annual, representing an asset due to the premium payment installments pending collection. Currently, fewer differences are recorded as a result of the reclassifications.

D.2. Technical provisions

Following are the technical provision valuations¹² using Solvency II criteria, including qualitative explanations for the main differences arising from their valuations using Solvency II criteria and those used in preparing the consolidated annual accounts at December 31, 2021. As indicated previously, this heading is affected by changes to the scope referred to at the beginning of this section of the report, which is why the "Adjusted book value" is included to reflect the adjusted IFRS valuation vs. the Solvency II scope and classification.

It must be pointed out that the MAPFRE Group operates in both the Life and Non-Life insurance lines.

Technical provisions	Solvency II value	Adjusted book value	Financial statements book value
Technical provisions - Non-Life	11,135.44	13,688.22	18,377.70
Technical provisions — Non-Life (excluding health)	10,779.64	13,270.14	
Technical provisions calculated as a whole	-		
Best estimate	10,399.91		
Risk margin	379.73		
Technical provisions - health (similar to Non-Life)	355.8	418.08	

¹² Gross and net reinsurance from intra-group operations.

Technical provisions	Solvency II value	Adjusted book value	Financial statements book value
Technical provisions calculated as a whole	-		
Best estimate	329.26		
Risk margin	26.54		
Technical provisions - Life (excluding index-linked and unit-linked and other collective investment institutions)	17,099.90	19,548.69	20,336.49
Technical provisions - health (similar to Life)	89.08	66.55	
Technical provisions calculated as a whole	-		
Best estimate	83.58		
Risk margin	5.5		
Technical provisions - Life (excluding health and index-linked and unit-linked and other collective investment institutions)	17,010.82	19,482.14	
Technical provisions calculated as a whole	-		
Best estimate	16,564.31		
Risk margin	446.51		
Technical provisions – index-linked and unit-linked and other collective investment institutions	2,295.73	2,447.98	2,957.26
Technical provisions calculated as a whole	2,350.42		
Best estimate	(59.25)		
Risk margin	4.56		
Other technical provisions		5.98	1,254.03
TOTAL TECHNICAL PROVISIONS	30,531.07	35,690.87	42,925.48

Figures in millions of euros

The main difference in valuations is because while under Solvency II, the technical provisions are valued under a market economic criterion, in the consolidated annual accounts, the technical provisions are calculated according to accounting rules (the technical provisions of insurance companies are added by method 1, method 2, or a combination of both methods, and the corresponding intra-group operation adjustments are subsequently applied).

D.2.1. Best estimate and risk margin

Best estimate

Under Solvency II in the MAPFRE Group, the value of the technical provisions of the individual companies is determined by following two procedures:

- As a general rule, technical provisions are calculated as the sum of two components: the best estimate of commitments held with insured parties plus the risk margin.
- Occasionally provisions are calculated as a whole: this methodology is applied when future cash flows associated with insurance obligations may be replicated using financial instruments with a directly observable market value. In this case, the value of technical provisions coincides with the market value of these financial products used for replicating future cash flows; it is unnecessary to make a determination between best estimate and risk margin. In general, these provisions are closely linked to unit-linked product-type valuations or assets.

The value of the technical provisions aims to reflect the hypothetical value of the policy portfolio if MAPFRE were to sell it on the free market. The calculation of the best estimate takes into account all

inflows and outflows of cash that are necessary at any given moment to settle the business obligations existing at the calculation date, (including both contracts in force and tacit renewals) and the time value of money (present expected value of the future cash flows) by applying the pertinent risk-free interest rate term structure.

Under certain circumstances, the best estimate may be negative for certain contracts in which the present expected value of the rights to future premiums exceeds the expected present value of the obligations assumed. In this case, these contracts are not valued at zero but rather they are considered to be an asset that reduces the value of their technical provisions.

Risk margin is similar to the cost of financing assumed by the hypothetical buyer of the portfolio sold by MAPFRE to hedge against the risks implicit in the purchased policies.

The best estimate of the MAPFRE Group's liabilities is the sum of the best estimate of the liabilities of separate companies, adjusted by the provisional transitional measure approved by the DGSFP, and only eliminating the portion of the best estimate resulting from the Group's reinsurance activities to avoid double recognition of the commitments on the consolidated financial statements. The risk margin is the sum of each participating Group insurance/reinsurance company's risk margin.

Contractual limits

As described in the Solvency II Directive, in order to take into consideration the future premiums established in the contracts when calculating the best estimate of Solvency II Provisions, the contract limits must be taken into account. These must meet a number of requirements which are discussed further on. Depending on the margins on the product premiums, the inclusion of contractual limits generates an increase in the best estimate (the worse the performance) or a decrease therein (the better the performance).

The contractual commitments, including those which correspond to the insurance/reinsurance company's unilateral right to renew or increase its limits and corresponding paid premiums, will be included in the text, except for:

- The obligations provided by the companies after the date on which they have the unilateral right to:
 - Cancel the contract.
 - Reject premiums payable under the contract.
 - Modify the premiums or benefits to which it is bound by virtue of the contract, so that the premiums fully reflect the risks.
- All commitments which do not correspond to premiums already paid, unless the policyholder may be forced to pay future premiums, provided the contract:
 - Does not establish an indemnity for a specified uncertain event that adversely affects the reinsured.
 - Does not include a financial guarantee of the benefits.

Options and guarantees

For those businesses and products that correspond, the value of the implicit financial options and guarantees is included in the best estimate. For some products, particularly those with a financial profit-sharing clause and a minimum guaranteed yield with a surrender value not limited to the realization of assets, a situation arises that is similar to that existing in the case of "put" financial options. These options are derivative financial instruments which, at a set fixed price make it possible to benefit from

increases in the underlying asset, with no risk of loss should they drop. The theory regarding the evaluation of financial options includes making a distinction between their intrinsic value and their value over time (sometimes also called extrinsic value) and there are certain deterministic (Black-Scholes equation) and stochastic (Monte Carlo methods) measurement methods. The valuation of these commitments follows the same theoretical principles and since their probable flows are more complex than those of a financial derivative, stochastic methods have been used. The financial scenarios used have been calibrated based on market prices that have been sufficiently verified and are sufficiently liquid (primarily swaptions and options on stock indexes).

Other types of products presenting options and embedded financial guarantees are: i) deferred products including the option of capital or income to maturity when the interest rate on the income is guaranteed, or ii) income with renewable guaranteed interest periods. In both cases, there is an option in the contract in favor of the policyholder whose value depends on the evolution of certain financial variables (mainly interest rates).

The best estimate includes, when appropriate, the valuation of the share in discretionary future profits that are expected to be made, regardless of whether or not they are contractually guaranteed or regulated. This fair value is calculated separately from the other flows in the best estimate.

Actuarial methods and assumptions used when calculating technical provisions

The main actuarial methodologies considered appropriate, applicable and relevant for the calculation of technical provisions under Solvency II by the MAPFRE Group are:

- For Life insurance:
 - Policy-by-policy calculations of the fair value expected from the commitments acquired based on existing statistical information on mortality, longevity, incapacity, etc.
 - Projections based on homogeneous policy groupings or model points in those cases where the calculations of policy-by-policy cash flows are disproportionate to the nature and complexity of the company's risks, and as long as the projection does not distort the results obtained.
 - Stochastic calculations, if any, to recognize the temporal value of options and guarantees.
- For Non-Life insurance:
 - A combination of generally accepted deterministic methods used for calculating the final loss experience based on a selection of factors to develop frequencies and average costs.
 - Stochastic methods for determining loss experience assuming a probability distribution function.

The following two key assumptions were used during the calculation of the technical provisions:

- Economic assumptions, which are compared against available financial and macroeconomic indicators which mainly include:
 - Interest rate structure broken down by currency in which the obligations are denominated.
 - Exchange rates.
 - Evolution of the markets and financial variables.
- Non-economic assumptions, which are mainly obtained from generally available data based on the companies of the MAPFRE Group's past experience, or external sector/market sources:

- Realistic administration, investment, acquisition, etc. expenses that will be incurred throughout the duration of the contracts.
- Portfolio decreases and redemptions.
- Mortality and longevity.
- Disability and other risks.

Also, it is worth noting that under accounting regulations, management's actions and policyholder behavior are not included when calculating technical provisions, while under Solvency II, companies may establish a comprehensive plan covering future decisions considering the necessary time frame to calculate their best estimates, including a probability analysis of when policyholders might exercise certain rights included in their insurance policies.

Risk margin

The risk margin, which is calculated identically for both Life and Non-Life businesses, is conceptually equivalent to the cost of supplying an amount of eligible own funds equal to the SCR, necessary to support insurance commitments during their entire period of validity and until they are definitively settled. The type used to determine that cost is called the cost-of-capital rate. The MAPFRE Group uses the 6 percent rate set by the Solvency II regulations.

There are a number of simplified methods to calculate risk margin:

- Level 1: explains how to approximate underwriting, counterparty, and market risks.
- Level 2: this is based on the assumption that the future solvency capital requirement will be proportional to the best estimate of technical provisions during the year in question.
- Level 3: this consists of using the modified duration of liabilities to calculate the current and future solvency capital requirement in one single step.
- Level 4: calculates the risk margin as a percentage of the best estimate of technical provisions net of reinsurance.

At MAPFRE Group, the different companies calculate their risk margins using Level 2 and Level 1 methodologies.

The SCR included for the calculation of the Risk Margin includes the regulatory capital obtained in each company of the Group, taking into consideration the internal models and/or specific parameters approved, if any.

TECHNICAL PROVISIONS - LIFE AND BURIAL INSURANCE

Technical provisions	Solvency II value	Adjusted book value	Financial statements book value
Technical provisions - Life (excluding index-linked and unit-linked and other collective investment institutions)	17,099.90	19,548.59	20,336.49
Technical provisions – index-linked and unit-linked and other collective investment institutions	2,295.73	2,447.98	2,957.26

Figures in millions of euros

In the case of the MAPFRE Group, 87.9% percent of gross Life insurance and burial insurance technical provisions under Solvency II are obtained as the sum of the best estimate and the risk margin, and the remaining 12.1% percent are calculated as a whole.

The best estimate of Life insurance obligations in accordance with established Solvency II criteria present the following differences with respect to those calculated based on annual account requirements:

- Different regulatory framework.
- The application of the concept of contractual limits, which involves the consideration of future business.
- The consideration of all cash flow sources.
- The financial discount of cash flows for a risk-free curve.

In the 2021 year, the net Solvency II provisions (of ceded reinsurance) of the businesses using Life techniques accounted for 88.2 percent of the accounting provisions, with the main valuation changes arising in the accounting provisions due to:

- The valuation of obligations to achieve the best estimate, generally produces i) a decrease in provisions due to the use of realistic assumptions derived from the experience of each company and due to the application of contract limits, which is offset by ii) an increase in the use of rate structures set in the Solvency II regulation that is partially mitigated by the elimination of IFRS adjustments that are introduced by valuation asymmetries into the accounting provisions. The total aggregate effect is decrease in provisions (13.9 percent).
- The introduction of the risk margin component, which implies an increase in provisions (2.1 percent).

TECHNICAL PROVISIONS — NON-LIFE

Technical provisions	Solvency II value	Adjusted book value	Financial statements book value
Technical provisions - Non-Life	11.135,44	13.688,22	18.377,70

Figures in millions of euros

In the MAPFRE Group, all technical provisions of insurance using Non-Life techniques are obtained as the sum of the best estimate and the risk margin, calculating the best estimate of obligations separately with respect to provisions for outstanding claims and the provision of premiums.

The best estimate of Non-Life obligations based on Solvency II criteria present the following differences with respect to those calculated based on annual account requirements:

- Different regulatory framework.
- The application of the concept of contractual limits, which involves the consideration of future business on the best estimate of premium provisions.
- The consideration of all cash flow sources.
- The credit risk adjustment to recoverable reinsurance amounts.
- The financial discount of cash flows.

In the 2021 year, the net Solvency II provisions (of ceded reinsurance) of the businesses using techniques other than Life accounted for 83.1 percent of the accounting provisions, with the main valuation changes arising in the accounting provisions due to:

- In the valuation of obligations to achieve the best estimate there was:

- A decrease of 2.0 percent arising from the application of discounts based on fixed-rate structures established in Solvency II regulations.
 - A decrease of 19.3 percent arising from the application of realistic hypotheses and contractual limits established in Solvency II regulations.
- The introduction of the risk margin component, which implies an increase of 4.4 percent in provisions.

Level of uncertainty associated with the amount of technical provisions

The hypotheses made on future experiences include expense forecasts, portfolio decrease rates, mortality, etc. These assumptions represent a reasonable estimate. However, future real experience is likely to differ from these assumptions, due to random fluctuations, changes in the operating environment and other factors. These variations might have an effect on the Solvency II valuations and therefore their periodic monitoring and updating.

As established by the Resolution of December 17, 2020, of the General Directorate for Insurance and Pension Funds, relative to the mortality and survival tables to be used by insurance and reinsurance companies, and by which is approved the technical guide relative to supervision criteria in relation to biometric tables, and on certain recommendations to promote the production of sectoral biometric statistics, proper biometric risk management requires solid and realistic biometric statistics based on reliable information on risk exposures, events insured (deaths, disability in its various forms, etc.) and the most relevant economic magnitudes.

For the purposes of Solvency II, the Group's entities use second-order biometric tables based on their experience and depending on each business, noting that in general:

- The data sources used to derive these biometric hypotheses are based on historical records of policies and claims of each company, complemented when appropriate with complementary external death data or indices. That is why the data used in the derivation is adequate, solid and complete.
- The observation periods used make it possible to capture all the relevant biometric behavior according to the nature of the insurance obligations contracted.
- The derivation is based on an appropriate combination of actuarial statistical analysis and expert judgment consistent with the baseline information.
- The biometric hypotheses are prepared by disaggregating each portfolio of each company and country into biometrically homogeneous groups.
- In the event of an atypical experience, such as that observed in those years affected by the COVID-19 pandemic, this information is analyzed and removed from the analysis if it is extraordinary and non-recurring in time.
- These tables are "best estimates" and do not include extra charges for uncertainty or risk.

For the purposes of calculating accounting provisions, the companies use biometric tables of the first regulatory order, or their own experience based on their local accounting regulations, carrying out an adequacy test of the liabilities to guarantee their sufficiency for Group purposes.

For pricing purposes, the companies use biometric tables of the first regulatory order or from their own experience, always complying with the legislation established in this regard in each country. The use of biometric hypotheses in the calculation of premiums contributes to guaranteeing their sufficiency and solvency. The biometric hypotheses applied to pricing processes take into account equity and sufficiency criteria.

Focusing by materiality on Spain and its Life businesses, it stands out that:

- For the pricing of Life-Risk insurance, the corresponding PASEM 2020 tables are used, and for Survival insurance, depending on the type of business, own experience tables or the corresponding PER 2020 tables.
- For the calculation of accounting provisions, own experience is used, provided there is a sufficient volume of data. Otherwise, the newly published tables are used. In any case, if the tables originally used in the "Pricing" are more conservative, the latter are also used for the provision.
- The MAPFRE companies in Spain have taken advantage of the transitory period for adapting accounting provisions to the new tables. The additional allocation for this adaptation in 2020 was, for companies within the perimeter, 9.1 million euros. This allocation does not have a significant effect on the equity situation or on the results of the Group and is adjusted with a charge against earnings, according to the annual minimum values established by Law.
- As of December 31, 2021, as a result of the allocations made during 2021 and the update of the calculation, the total amount to be transferred for the coming years pending, for the companies within the perimeter, is 4.9 million euros. This allocation will be adjusted periodically charged against earnings and in accordance with the legislation in the remaining period from 2022 to 2024.
- An analysis of the impact of the existing technical surcharges between the first-order and second-order tables on provisions for companies in Spain has been carried out. For MAPFRE's Life business in Spain, this impact amounts to 179,689 thousand euros.
- In each case, the tables currently used are sufficient based on the analysis of our own experience, either because the rate tables continue to be sufficient, or because they have been reinforced in recent years according to current requirements, without the changes in the exercise are relevant.

D.2.2. Package of measures designed for managing long-term guarantees

As established in the Solvency II regulation, the MAPFRE Group requested the application of transitional measures in the calculation of technical provisions and obtained a positive response from the DGSFP regarding that application.

The calculation of MAPFRE Group solvency under Solvency II with a reference date of December 31, 2021 was done taking into account that transitional measure affecting technical provisions. The Group's consolidated provisions for individual companies also take into account the matching adjustments and volatility adjustments in some countries and Life-specific businesses.

The information below reflects the quantitative disclosures on the impact of long-term guarantees and transitional measures used by the Group:

	Amount with Long Term Guarantee measures and transitionals	Impact of transitional on technical provisions	Impact of transitional on interest rates	Impact of volatility adjustment set to zero	Impact of matching adjustment set to zero
Technical provisions ¹³	30,531.07	657.29	0.00	14.26	205.47
Basic own funds	7,848.50	(492.97)	0.00	(10.70)	(154.10)
Total eligible own funds to meet the solvency capital requirement	9,301.52	(492.97)	0.00	(10.70)	(154.10)
Solvency capital requirement	4,507.77	(0.69)	0.00	(0.22)	(108.88)

Figures in millions of euros

(*) Template S.22.01.22

¹³ Technical net reinsurance provisions and intra-group operations.

D.2.2.a. Matching adjustment

The Solvency II Directive allows insurance companies to apply a matching adjustment to the relevant term structure of risk-free interest rates, subject to the approval of their supervisory authority and provided that certain conditions are met.

This matching adjustment is used by different Group companies with the Life business, once the relevant authorization from the Supervisory Body has been obtained, complying with the requirements necessary to be able to apply the adjustment as at December 31, 2020.

Failure to comply with the requirements associated with the application of the adjustment would lead to the matching adjustment not being applied, leading to an increase in the valuation of the Solvency II technical provisions totaling 205.47 million euros and a decrease in the Solvency Capital Requirement of 108.88 million euros.

D.2.2.b. Volatility adjustment

The Solvency II Directive allows insurance companies to apply a volatility adjustment to the relevant term structure of risk-free interest rates.

Some of the MAPFRE Group companies have used this volatility adjustment: chiefly companies operating in Spain and Portugal's Life insurance business. For the portion of insurance commitments for which the volatility adjustments were applied, the above-mentioned matching adjustment is not applied.

Euro's volatility adjustment as at December 31, 2021 is 3 basis points. Not applying the volatility adjustment would have an impact on the Solvency II technical provisions of 14.26 million euros.

D.2.2.c. Risk-free interest rate transitional term structure

The MAPFRE Group did not use the risk-free interest rate transitional term structure.

D.2.2.d. Transitional deduction for technical provisions

The Solvency II Directive allows insurance companies to apply a transitional deduction on technical provisions after approval by their supervisory authority.

The MAPFRE Group has used this transitional measure only for Life obligations from Spain, once the relevant authorization has been obtained. Products affected by this transitional measure generally constitute non-matched profit-sharing savings insurance, excluding those which are unit-linked and index-linked (which do not meet the requirements established to apply the above-mentioned matching adjustment).

Failure to implement the transitional measure would result in an increase in the Solvency II technical provisions of 657.29 million euros and a decrease in the eligible own funds of 492.97 million euros.

D.2.3. Significant changes in the assumptions used when calculating technical provisions

There have been no significant changes with respect to the assumptions used in the calculation of the technical provisions, beyond those taking place due to the application of the package of long-term guarantees.

D.2.4. Other technical provisions

Technical provisions	Solvency II value	Adjusted book value	Financial statements book value
Other technical provisions		5.98	1.254.03

Figures in millions of euros

This mainly includes the book value of burial provisions, which for Solvency II purposes and Adjusted Book Value are included under the Life business technical provisions.

D.3. Other liabilities

Following are the valuations of other significant liabilities using Solvency II criteria, including qualitative explanations for the main valuation differences as a result of both criteria at December 31, 2021. The valuation relating to headings which do not present differences between the criteria established in IFRS and Solvency II are set out in MAPFRE Group's 2021 consolidated annual accounts.

Other liabilities	Solvency II value	Adjusted book value	Financial statements book value
Total technical provisions	30,531.08	35,690.86	42,925.48
Contingent liabilities	0.00	0.00	0.00
Provisions other than technical provisions	225.09	222.32	472.81
Pension benefit obligations	180.9	180.9	180.9
Deposits from reinsurers	83.02	83.02	82.44
Deferred tax liabilities	3,188.58	1,857.79	537.81
Derivatives	428.3	428.3	0
Debts owed to credit institutions	942.79	958.55	1,106.53
Financial liabilities other than debts owed to credit institutions	1,707.78	1,683.23	3,231.32
Insurance and intermediaries payables	578.17	532.78	914.99
Reinsurance payables	641.76	674.91	1,252.83
Payables (trade, not insurance)	1,406.57	1,414.30	1,936.15
Subordinated liabilities	1,170.03	1,122.20	1,122.20
Subordinated liabilities not in basic own funds	0.00	1,122.20	1,122.20
Subordinated liabilities in basic own funds	1,170.03		
Any other liabilities, not elsewhere shown	116.44	277.95	424.39
TOTAL LIABILITIES	41,200.52	45,127.12	54,187.85
EXCESS OF ASSETS OVER LIABILITIES	8,816.37	8,914.05	9,666.44

Figures in millions of euros

Deferred tax liabilities

Deferred tax liabilities are valued in a manner similar to that indicated for deferred tax assets. The MAPFRE Group recognized deferred tax liabilities at the "Adjusted book value" of 1.86 billion euros.

The difference between the "Solvency II Value" and the "Adjusted Accounting Value" of the Deferred Tax Liabilities is mainly explained by the different valuation criteria of the Technical Provisions and by

the differences in the value of the Properties. Given the nature of the deferred tax liabilities held by the MAPFRE Group, there is no specific expiration date for them.

Subordinated liabilities

The MAPFRE Group's subordinated liabilities correspond to those issued by MAPFRE S.A. and are classified as "Subordinated liabilities not in basic own funds".

These are valued at amortized cost under IFRS, while under Solvency II criteria, were valued discounting the forecasted cash flows using the curve corresponding to December 31, 2021 and adding the credit differential during the issuing of each subordinated liability.

Other liabilities, not shown elsewhere

Under IFRS this heading covers the Commissions and other periodic acquisition expenses of the ceded reinsurance, contrary to the Solvency II valuation criteria in which the balance sheet considers the valuation of the technical provisions by including all associated expenses. Therefore, they are not included in this heading.

This heading also includes the amount of any other liabilities not included in other balance sheet items; for solvency purposes, its value coincides with IFRS guidelines.

D.4. Alternative methods for valuation

The Group uses alternative valuation methods mainly for certain non-liquid financial assets and some liabilities, although their use is in general terms limited and does not have a significant impact on the values of assets and liabilities taken as a whole.

The alternative or "mark-to-model" valuation techniques are periodically back-tested (contrasted against past liquid market values). When this type of technique is used, the application of observable inputs is maximized and the methodological guidelines and conceptual framework established in IFRS 13 are generally followed when the market is active.

The methodology used corresponds to the discount of the risk-free interest rate from future cash flows, increased by spreads established based on the risk arising from the probability of the issuer's default, and where applicable, the instrument's lack of liquidity; these differentials are set by making comparisons with credit derivatives or similar liquid issues.

The Group considers that this generally accepted methodology, which is commonly used in the market, adequately includes the risks which are inherent to this type of financial instrument.

D.5. Any other information

There is no other significant information on the valuation of assets and liabilities not included in previous sections.

Finance and operating leases

Finance and operating leases are described in Section A.4.2 of this report.

D.6. Appendixes

A) Assets

Quantitative information on Assets as on December 31, 2021 and December 31, 2020:

Asset (*)	Solvency II value	Solvency II value
	2021	2020
Intangible assets	-	-
Deferred tax assets	2,740.33	3,825.76
Pension benefit surplus	173.44	103.24
Property, plant and equipment held for own use	1,378.17	1,312.62
Investments (other than assets held for index-linked and unit-linked contracts other collective investment institutions)	34,216.44	42,481.26
Property (other than for own use)	1,376.32	1,676.72
Holdings in related undertakings, including participants	3,829.15	3,401.15
Equities	1,499.39	1,521.34
Equities — listed	1,440.58	1,479.23
Equities — unlisted	58.82	42.11
Bonds	24,760.76	33,320.91
Government Bonds	17,636.60	24,620.68
Corporate Bonds	6,260.28	7,580.12

¹⁴The amount of total liabilities includes not only the total of the Other liabilities in this table, but also the total technical provisions in Annex D.6.B).

E. Capital management

E.1. Own funds

E.1.1 Own fund objectives, policies and management processes

The main objectives for the management and monitoring of own funds and capital are:

- Check that eligible capital continually meets eligible regulatory requirements and Risk Appetite.
- Ensure that eligible capital projections take into account ongoing compliance with the applicable regulations during the whole period.
- Establish a process for the identification and documentation of ring-fenced funds and the circumstances under which eligible capital can absorb losses.
- Ensure that the Group has a medium-term Capital Management Plan.
- Capital management will take into account the results from the Own Fund Risk and Solvency Assessment (ORSA), as well as the conclusions reached during that process.
- Within the framework of the Medium-term Capital Management Plan, should it be deemed necessary to obtain new resources, the newly issued capital instruments should be assessed to determine that they meet the conditions for inclusion within the desired eligible capital quality level.

Where it is identified that eligible capital may be insufficient at any time during the period under consideration in the three-year projections, the Corporate Risk Office should propose future management measures to be taken into account in order to rectify this insufficiency and maintain solvency margins within those established by the corresponding regulations and Risk Appetite Policy.

The Medium-term Capital Management Plan prepared by the Corporate Risk Office and approved by the Board of Directors, must at least contemplate the following:

- Compliance with applicable solvency regulations throughout the projection period in question, paying special attention to known future regulatory changes and maintaining solvency margins compatible with those contained in the provisions of the Risk Appetite.
- All eligible capital instruments envisaged.
- Refunds, both contractual on the due date and those which it is possible to make on request before maturity, relating to elements of eligible capital.
- The result of the projections contained in the Own Risk and Solvency Assessment (ORSA).
- The dividends envisaged and their effect on eligible capital. Given the uncertainty generated by the pandemic, supervisors recommended extreme caution in the distribution of dividends and similar operations. In this regard, the Group has carried out an exhaustive prospective analysis that justifies that the distribution of dividends does not compromise the financial or solvency situation or the protection of the interests of policyholders and insured and is carried out in accordance with the recommendations of supervisors in the matter.

The MAPFRE Group has used the transitional measure on technical provisions provided for in Solvency II, subject to the approval of its supervisory authority. In this regard, it has been assessed that there is eligible capital to cover SCR during the transitional period, considering all the transitional arrangements applied.

During 2021, there were not any significant changes in the objectives, policies and processes used to manage own funds.

E.1.2 Structure, amount, and quality of own funds

Below are shown the structure, amount, and quality of own funds, as well as the MAPFRE Group's coverage ratios (both the Solvency ratio, which is the ratio of eligible own funds to the Group's SCR, and the Ratio of eligible own funds and the consolidated Group's minimum SCR):

	Total		Tier 1 — unrestricted		Tier 1 – restricted		Tier 2		Tier 3	
	2021	2020	2021	2020	2021	2020	2021	2020	2021	2020

The eligible amount of own funds to cover the SCR, broken down by Tiers

The Group had 9.30 billion euros in eligible own funds as of December 31, 2021 (8.92 billion euros as of December 31, 2020).

As established by the regulations currently in force, own funds can be classified as either basic or supplementary. In turn, own funds may also be classified by Tier (1, 2, or 3) to the extent that they have certain characteristics determining their availability to absorb losses.

At December 31, 2021, the Group had basic unrestricted Tier 1 basic own funds amounting to 6.68 billion euros (6.19 billion euros as of December 31, 2020); these own funds offer maximum loss-absorbing capacity while meeting the permanent availability requirements established, with sufficient subordination and duration, and are comprised by:

- Ordinary paid-up capital.
- Share premium relating to ordinary paid-up capital.
- Reconciliation reserve.
- Surplus funds.
- Non-controlling interests, from which the part not available at Group level is deducted.

In addition, unrestricted Tier 1 Own Funds include 1.27 billion euros from companies included by the deduction and aggregation method (1.32 billion euros as of December 31, 2020) and 179.64 million euros from companies in other financial sectors (186.59 million euros as of December 31, 2020), reaching a total of unrestricted Tier 1 own funds of 8.13 billion euros (7.70 billion euros as of December 31, 2020).

Furthermore, as of December 31, 2021, the Group's basic Tier 2 own funds totaled 1.17 billion euros (1.22 billion euros as of December 31, 2019), and originated in two issuances of subordinated debt carried out in March 2017 and August 2018, both for 30 years, and with a 10-year call option. They are listed on the AIAF Market (Spanish Association of Financial Intermediaries) integrated into the BME (Bolsas y Mercados Españoles). In April 2022, a subordinated debt issue classifiable as level 3 was

made for an amount of 500 million euros and maturing in 8 years, not included in equity as of December 2021.

It is important to note that eligible own funds do not have net deferred tax assets; all the Group's own funds are considered basic, and no supplementary own funds were computed.

SCR coverage

The Solvency Capital Requirement (SCR) corresponds to the own funds that the Group must possess to limit the probability of bankruptcy to one case per 200, or that it still be 99.5 percentile able to meet its commitments to insurance beneficiaries and policyholders during the following 12 months.

Regulations determine which own funds are suitable for covering the SCR, in accordance with which all unrestricted basic Tier 1 own funds are eligible for that coverage; limits are set for Tier 2 basic own funds, although MAPFRE considers them all eligible to cover the SCR.

The Group's solvency ratio was 206.3 percent during 2021 (192.9 percent in 2020) and determines the relationship between eligible own funds and the SCR calculated using the standard formula for all risks except for the longevity sub-risk, which was calculated according to the recently approved Partial Internal Model. It reflects the Group's elevated capacity for absorbing extraordinary losses arising in an adverse scenario, under the Risk Appetite established by the Group and approved by the Board of Directors.

Minimum consolidated Group SCR coverage

Solvency II regulations define a minimum consolidated Group SCR obtained from MCRs (Minimum Capital Requirements) of participating and related insurance and reinsurance companies, and determines the minimum amount for the Group's SCR as a floor.

With regard to its coverage, all unrestricted Tier 1 Basic Own Funds (6.68 billion euros) are eligible, as well as 336.17 million euros of Tier 2 Basic Own Funds.

The ratio between eligible own funds and the minimum consolidated Group SCR was 417.3 percent in 2021 and 362.6 percent in 2020.

Difference between equity in the financial statements and surplus assets compared with liabilities for Solvency II purposes

When valuing assets and liabilities for the purposes of Solvency II, in some relevant headings, different criteria are used from those used when preparing the financial statements. These disparities in the valuation lead to differences between the book equity and the surplus assets compared with liabilities for Solvency II purposes.

As on December 31, 2021 the surplus of assets compared with liabilities for Solvency II purposes amounted to 8.82 billion euros, while equity at book value was 9.67 billion euros. The main adjustments that arise from the reconciliation of equity under IFRS and own funds under Solvency II may be observed below:

	2021	2020
Equity IFRS annual accounts	9.666,44	9.837,84
Solvency II scope adjustments	(752,39)	(623,86)
Equity IFRS scope Solvency II	8.914,05	9.213,98
Elimination goodwill and intangible assets	(2.542,91)	(2.660,06)
Elimination prepaid commissions and other acquisition costs	(995,88)	(1.102,53)
Adjustments to net deferred tax assets/liabilities	(61,84)	63,67
Valuation adjustment PP&E for own use	329,90	223,89
Valuation adjustment investments	(308,21)	(80,11)
Valuation adjustment recoverable reinsurance amounts	(1.024,89)	(917,42)
Other valuation adjustments to other assets	(751,25)	(751,37)
Valuation adjustments technical provisions	5.159,78	4.539,55
Other valuation adjustments to other liabilities	97,61	(46,58)
Asset surplus vs. liabilities Solvency II	8.816,37	8.483,02

Figures in millions of euros

The quantitative and qualitative explanations are provided in Sections D.1 "Assets," D.2 "Technical provisions," and D.3 "Other liabilities," in this report.

E.1.3. information regarding deferred taxes

Deferred tax assets on the Solvency II balance sheet amount to 2.74 billion euros, while deferred tax liabilities are 3.19 billion euros. Both amounts are calculated by adding the deferred tax assets and liabilities in the balance sheet of the companies that fall within the calculation perimeter, making the relevant consolidation adjustments. To this end, individual companies have previously recognized deferred tax assets due to the fact that they have, for the most part, deferred tax liabilities.

E.1.4. Other information

Essential items in the reconciliation reserve

The Reconciliation reserve includes the potentially most volatile component of own funds; changes therein are determined by the Group's asset and liability management.

The tables included at the start of the section indicate the structure, amount, and quality of own funds and present the essential items taken into account to calculate the reconciliation reserve based on the amount of surplus assets compared to liabilities for Solvency II purposes, which amounts to 8.82 billion euros.

To determine the reconciliation reserve the following items were deducted:

- Dividends, distributions, and foreseeable costs totaling 274.76 million euros.
- Treasury stock in the amount of 62.94 million euros.
- Other basic own funds totaling 2.61 billion euros that are considered to be independent own fund items (ordinary paid up capital, share premium, surplus funds and non-controlling interests).

Items deducted from own funds

The MAPFRE Group has carried out an analysis on the transferability and fungibility of the own funds Group's insurance companies included in consolidation perimeter of Solvency II by evaluating the regulations in force in the countries in which it is present.

Based on the analysis, surplus own funds from non-controlling interests were not considered transferable to the Group's SCR contribution. Surplus own funds in the portfolios subject to matching adjustments or ring-fenced funds are considered transferable to the extent that the asset or portion generating the surplus is transferable without affecting compliance with the requirements of the matching adjustment or ring-fenced funds. To December 31, 2021, no adjustments were made in this regard.

Own funds issued and instruments redeemed

As mentioned previously, in March 2017 the MAPFRE Group issued a 30-year subordinated debt with a 10-year call option in the amount of 600 million euros. In turn, in August 2019, another subordinated debt issue was issued, also at 30 years and with a 10-year call option, for an amount of 500 million euros. These are considered basic Tier 2 funds due to their capacity for absorbing losses. In April 2022, a subordinated debt issue classifiable as level 3 was made for an amount of 500 million euros and maturing in 8 years, not included in equity as of December 2021.

Special-purpose companies in the Group

The MAPFRE Group does not have any special-purpose companies in place.

Transitional measures

As on December 31, 2021, the Group has not considered own funds items to which the transitional measures referred to in Solvency II regulations have been applied.

Significant sources of the Group's diversification effect

The Group is well-diversified, as it operates in virtually all insurance business lines and has a broad presence in international markets.

The distribution of gross premiums issued by regional areas and business units is as follows:

Area / Business Unit	2021	2020	% variation compared to 2020
IBERIA	7,596.4	6,998.9	8.5%
BRAZIL	3,340.1	3,085.4	8.3%

E.2. Solvency capital requirement and minimum capital requirement

E.2.1. Solvency capital requirement amounts and valuation methods

The SCR is detailed below, broken down by components, calculated by applying the standard formula and the longevity partial internal model:

Unique number of component	Components description	Calculation of the Solvency Capital Requirement	Amount modelled	Undertaking Specific Parameter	Simplifications
1	Market risk	2,999.25	0.00		-
2	Counterparty default risk	635.75	0.00		
3	Life underwriting risk	610.58	112.37	-	Mortality risk, life catastrophe risk, disability and morbidity, life expense risk and longevity risk
4	Health underwriting risk	269.87	0.00	-	-
5	Non-life underwriting risk	2,298.37	0.00	-	-
7	Operational risk	476.91	0.00		
8	Loss-absorbing capacity of technical provisions	(557.32)	0.00		
9	Loss-absorbing capacity of deferred taxes	(998.44)	0.00		

Figures in millions of euros

(*) Template S.25.02.22

As established in Commission Implementing Regulation (EU) 2015/2452, the above table reflects adjustments arising from ring-fenced funds and portfolios subject to matching adjustments to the different risk modules.

In the Life underwriting risk, some companies have used simplified SCR calculations. The Life underwriting SCR portion calculated using the above simplifications is estimated at 12.9 percent of this SCR (prior to diversification). The use of these simplifications is considered appropriate based on the nature, volume, and complexity of the associated risks.

Calculation of the solvency capital requirement (*)	Amount

Capital requirement for other financial sectors (Non-insurance capital requirements) - Institutions for occupational retirement provisions	0,00
Capital requirement for other financial sectors (Non-insurance capital requirements) - Capital requirement for non-regulated entities carrying out financial activities	0,00
Capital requirement for non-controlled participation requirements	26,79
Capital requirement for residual undertakings	91,49
Overall SCR	0,00
SCR for undertakings included via deduction and aggregation	671,31
Solvency capital requirement	4.507,77

Figures in millions of euros

(*) Template S.25.02.22

The Group's solvency calculations are detailed in Section D Valuation for solvency purposes.

The composition of the SCR is set out below and descriptive information is offered in Section C of this report:

The total amount of the Group's SCR as on December 31, 2021 was 4.51 billion euros (4.62 billion euros in 2020).

The SCR decreased mainly due to the exit of BANKIA VIDA from the Group. This drop is partly offset by market risk, whose rise is largely due to an increase in equity risk caused by a growth in equity exposure and a rise in the symmetrical adjustment established by EIOPA. (from -0.48% to 6.88%).

The loss-absorbing capacity of the technical provisions amounted to 557.32 million euros (479.38 million euros in 2020), and the loss-absorbing capacity for deferred taxes totaled 998.44 billion euros (953.19 billion euros in 2020).

The contribution to the Group's SCR for the different types of companies involved is as follows:

Consolidated SCR breakdown	Amount
SCR insurance and reinsurance companies, insurance portfolio companies, and ancillary services companies ¹⁵	3,682.63
SCR investees ¹⁶	26.79
SCR investment companies and fund managers ¹⁷	35.56
SCR other related companies ¹⁸	91.49
SCR for companies subject to the consolidation method (Method 1)	3,836.46
SCR for companies included using the deduction and aggregation method (Method 2)	671.31
Group SCR	4,507.77

Figures in millions of euros

The minimum consolidated Group SCR, as on December 31, 2021, amounted to 1.68 billion euros (1.81 billion euros as of December 31, 2020).

¹⁵ Insurance and reinsurance companies, insurance and reinsurance companies of tertiary countries, insurance portfolio companies, mixed portfolio financial companies and ancillary services subsidiaries of the parent company integrated using the full or proportional consolidation method (Articles 335.1 a) and c) of the Delegated Acts Regulation.

¹⁶ Investments in related insurance and reinsurance companies, insurance and reinsurance companies of tertiary countries, insurance portfolio companies, mixed portfolio financial companies not subsidiaries of the parent company integrated using the adjusted investment method (Article 335.1 d) of the Delegated Acts Regulation.

¹⁷ Article 335.1. e) of Delegated Acts Regulation.

¹⁸ Article 335.1. f) of Delegated Acts Regulation.

E.2.2. Information regarding the Solvency Capital Requirement and the Minimum Required Capital

The MAPFRE Group has adjusted the Solvency capital requirement to take into account the loss-absorbing capacity of deferred taxes at 998.44 million euros. This amount is obtained by adding the figures from the companies with ring-fenced funds with portfolios subject to matching adjustment as well as the rest of the companies within the calculation perimeter, considering, in the latter case, the diversification of risks existing within the Group.

The companies justify the recoverability of loss-absorbing capacity of deferred taxes with the reversal of net deferred tax liabilities arising in the Solvency II balance sheet and with projected future economic benefits.

The Group has provided a corporate tool to facilitate and standardize the projection of future profits, after the instantaneous loss equal to the BSCR plus the operational risk by deducting the loss-absorbing capacity of technical provisions.

E.3. Use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement

The MAPFRE Group did not use this option when performing its solvency valuation.

E.4. Differences between the standard formula and any internal model used

The MAPFRE Group calculates the Solvency Capital Requirement (SCR) in accordance with the requirements of the standard formula for all risks except for the longevity sub-risk of MAPFRE VIDA, which is calculated with a partial internal model approved by the General Directorate for Insurance and Pension Funds.

E.4.1. Purposes of using the Internal Model

The Partial Internal Model for the longevity risk is used in order to achieve a more accurate estimate that better adapts to the longevity risk that MAPFRE VIDA bears in its portfolio of policyholders. The model is integrated into the risk management and decision-making and is thus used in processes such as:

- Calculation of capital requirements in the longevity sub-module.
- Capital management by including it in its Risk Appetite.
- Study of the profitability of the new products that are launched on the market.
- Business valuation under Embedded Value.

E.4.2. Scope of the Internal Model

The Partial Internal Model for the longevity risk considers the entire portfolio of policyholders of MAPFRE VIDA affected by longevity risk, except for the part of the co-insurance business that does not have the necessary information on policyholders. This business, increasingly residual and immaterial, would continue to use standard formula criteria.

E.4.3. Technical description of integration of the Partial Internal Model in Standard Formula

The Partial Internal Model calculates the impact of the longevity risk to later determine the total risk by applying the correlation matrices of the Standard Formula. The effect of applying these matrices is a reduction of the risks. This reduction, known as the diversification benefit, recognizes the fact that the

extreme scenarios of each sub-risk are quite unlikely separately, so the probability of their simultaneous occurrence is very low.

E.4.4. Description of calculation methods for the probability distribution forecast and the Mandatory Solvency Capital

The Partial Internal Model is based on projections, models and stochastic techniques fully accepted in the market and whose objective is to determine a probability of death (and consequently also survival) for each age and for each future year considered for the Spanish population.

With this aim, sufficient simulations of the survival rates are generated to obtain a probability distribution of the present value of the obligations of the insured portfolio. The difference between this value at the 99.5 percentile and its expected value will be the capital charge necessary for the longevity risk.

E.4.5. Differences between the methods and hypotheses of the Internal Model and the Standard Formula

The Partial Internal Model differs from the standard formula by quantifying the impact of unexpected losses that occur in the company itself due to the calculation. The standard formula, as its name indicates, implies the use of a standardized methodology for all insurance companies that face the risks and sub-risks covered. In particular, the standard formula analyses a single scenario of reducing mortality by 20 percent.

E.4.6. Risk measurement and time horizon used in the Internal Model

Both the risk measure and the time horizon used in the Internal Model are the same as those used in the Standard Formula. The Solvency II Directive defines that the SCR is equal to the value at risk of the basic own funds with a confidence level of 99.5 percentile in a time horizon of one year.

E.4.7. Description of the nature and suitability of the data used in the Internal Model

The data used for the development of the Partial Internal Model are obtained from external sources such as historical mortality data for the Spanish population and internal ones such as, for example, the distribution and characteristics of the insured portfolio and mortality data based on the own experience of the company.

E.5 Non-compliance with the Minimum Capital Requirement and the Solvency Capital Requirement

As on December 31, 2021, the Group maintained a high coverage of the Solvency Capital Requirement using eligible own funds, and therefore it was considered unnecessary to adopt any other action or corrective measure.

E.6. Any other information

During the reference period, there have been no significant changes in the information included in the request for approval of the matching adjustment by the supervisory authorities.

There is no other significant information regarding the management of capital that has not been included in the preceding sections.

Appendix I

On the following pages, and in two groups of information (pages 91 to 104 and pages 105 to 116), there is a detailed description of the subsidiaries and companies included in the scope of the Group, according to the quantitative information template - Companies included in the scope of the group:
